

Repair Tips

Check for hidden leaks by monitoring your h2o meter

Insulate your h2o pipes - you'll get hot h2o faster and avoid wasting h2o while it heats up

Outdoor Tips

Plant low-h2o use and native plants instead of turf

Clean your driveway with a broom, not a hose

Adjust irrigation when the seasons change

Adjust sprinkler so only the lawn is h2oed, not the sidewalk or street

Don't h2o on windy days

When mowing, raise the blade level to its highest level. Close cut grass makes the roots work harder, requiring more h2o
