About F-Secure Anti-Virus for Windows Servers

F-Secure® Anti-Virus™ for Windows Servers ensures that users who connect with infected machines to the corporate file servers do not spread viruses to others on the network. With F-Secure, antivirus protection is fast, efficient and easy. Antivirus installations and management can be done remotely from one central location.

What's New in Version 5.52?

This section describes the new features and enhancements in F-Secure Anti-Virus for Windows Servers 5.52, and most important problems that were fixed.

F-Secure Anti-Virus for Windows Servers

Version History

5.52 build 11410

- Bug fixes (see below).

Most Important Fixed Problems

- #42399, Getdbhttp.exe issue

This hotfix corrects a limitation in older versions of the getdbhttp-tool. This legacy update method in the affected product versions is not scalable enough to handle the constantly increasing virus definition databases. This hotfix is necessary if a product that the fix applies to is connected to a F-Secure Anti-Virus Proxy server or uses the legacy http-based method to retrieve updates directly from F-Secure.

The hotfix is mandatory after December 31st 2005 in these cases.
