

Bracketter is being distributed via BBS in a self-extracting compressed file named BRACK--@.EXE

The following files must be included for Bracketter to setup and run properly:

BRACKET.EXE  
BRACKET.HLP  
THREED.VBX  
CMDIALOG.VBX  
BK\_SETUP.EXE  
SETUPKIT.DLL  
VER.DLL

VBRUN200.DLL also must be in your windows/system directory. This file can be downloaded from many BBSs.

Run BK\_SETUP.EXE to copy the .VBX files to your "windows\system" directory, create a working directory for Bracketter, copy the necessary files to that directory, and create a Bracketter group and icon in the program manager.

BK\_SETUP.EXE will only run if VBRUN200.DLL is in your WINDOWS\SYSTEM directory or path.
