TEXT1,C,79   TES

@6   6

Welcome to Chapter 11. In this chapter we'll examine the   0
concept of 'layering' that allows you to design the program   0
to your needs.   0
[Note that the screens in the Category Select menu were recently   0
rearranged and, therefore, look different from this tutorial.   0
The logic, though, is the same.]   0
                                                                                                          0

@6   6

With this option, you can "layer-in" up to 99,999,999 different layers   0
or groupings of records in the Master File. Once you identify a new   0
group of records, you can separate them by assigning a unique   0
CATEGORY number to the group while you are entering their information   0
into the Master File. From that point on, anytime you wish to   0
segregate that block of records from either the Master File or   0
Activity file, just go to the Main Program Menu and enter the Select   0
Category option.   0
                                                                                                          0

@6   6

All records have a default category of '1'. If you were to look at   0
the entry in the Master File for the 'NBF199' truck that you entered   0
earlier, you would see in the bottom left corner: 0
-       Category of Maintenance: 0
-             1   0
                                                                                                          0
                                                                                                          0
