Bring new life to your Windows desktop for Halloween with coordinated sets of wallpaper and color schemes. COORDHAL.EXE contains 10 different .BMP files for use as tiled wallpaper for Halloween fun, plus 10 coordinated color schemes you can add to Control Panel to bring your entire desktop look together.

This archive includes the following Coordinated Desktop schemes:

Happy Halloween -- Open the season's festivities by bringing on the oranges, browns, golds, and spice tones.

Husks -- The abstract essence of drying shucks of the farm field come indoors for the desktop in tones of rust, straw, and gold.

Batty -- Bats in your belfry? Let them loose to fly against a full harvest moon while a midnight appearance of blacks and deep purple falls upon your screens with a hint of moonlight shine.

Embers -- When the flames have subsided from your pile of burning fall leaves, you can watch the dancing embers for hours in the twilight as they flicker and weave amongst the ashes. Recapture that experience in desktop form against screens of black, red, and glowing orange.

Happy Pumpkin -- You can almost smell the cinnamon spices of the pie as pumpkin oranges and browns bid you a cheerful autumnal greeting.

Spook -- This little ghostie may not scare you, but he's certainly going to try, as he paints your windows in ominous tones of grays with just a touch of spooky "blood".

Injun Summer -- Lighten the tone as you recall times past with screens of maize and orange. The smoky essence may transport you to your own intriguing memories.

Haunted -- What would this season be without a few chills creeping up your spine? Just when you thought it was safe to work on your desktop, the rich violets and deep blacks of Haunted may have you shivering at mysterious noises in the middle of the night.

Kittycat -- Such a cute little kittycat...with its laid-back ears and arched profile! The black and yellow of kitty's eyes will follow you through all your Windows applications.

KornRows -- Your windows aren't dressed for the season without the warm and rich colors of Indian corn, zigging and zagging across the desktop in neat, orderly rows.

The necessary Windows color changes to coordinate your desktop with the the wallpaper are provided, along with instructions for their use, in the included COLORHAL.TXT file.

Note: The installation of the color schemes requires cutting and pasting to your CONTROL.INI file. A backup of CONTROL.INI should be made before a color scheme change is attempted.

Documentation: COLORHAL.TXT and INFOHAL.WRI.

If you enjoy these selections, please also look for other Coordinated Desktop packages available, such as COORD1.EXE, COORD2.EXE, and COORD3.EXE, in the Miscellaneous section of the Windows software forum on AOL
