Running Transfer

In the System screen, highlight Transfer and press the Enter key.

Choose Merge in from the File menu.

ou will now see the following dialog box:

ource file is the file you brought over from your Mac, press the arrow keys until you choose the right one. (Phone.txt in this example)

Type in a name on the third line.   (Phone in this example)

Choose the same delimiter you exported from your Mac application.   (TAB in this example)

If your database application puts quotes around fields (Sharp Wizards do this) you can use the Strip quotes option to get rid of them.

Process labels lets you add labels, we have provided default labels for the Series 3a, ACT! for Macintosh, and Dynodex.   If you wish to create your own labels, see the section titled Creating labels.

ress the Enter key to finish the dialog.

If you choose to process labels, you will be asked what template you wish to use, use the arrow keys to choose the appropriate one.   Press the Enter key to complete the dialog.

ou should see confirmation of it converting.

ou will then get a message stating how many records were converted.

o use you file, just go to the System Screen, your new file will be listed under the Data Icon.   To use it, just highlight it and press Enter.
