

# Caesar II INSTRUCTIONS

To help you understand how the various elements of Caesar II work, do the following:

Use the Query button (it is the "?" button located in the Toolbox). Simply click on this button, then on anything in the map window. A shortcut is to Shift-Click on an item in the map window.

Use the pop-up menu at the top of the Toolbox to see how and where your city is in need. Click to the right of the pop-up to get color-coded status information.

Pay attention to the left part of the Status Bar for help information. When you hold your cursor over a button its name (function) will be displayed there. Other useful information will also appear in the Status Bar.

Players start with a province, and from there they build their capital city. They must then control every economic aspect of the city, from building entertainment areas to deciding where to put the roads. If players wish, they can play a conquest game in which they must also build armies to protect themselves and to conquer opponents.
