

MINICALC3 by TERRY FERGUSSON

Directions for MiniCalc3

Have you ever wanted to make a small calculation while working in Windows but didn't want to load the Windows calculator because it was too large or too powerful for the small calculation you wanted to do? Perhaps you want to be able to use a calculator and still be able to see the application you're working in? If you have, then MiniCalc3 is the program for you.

MiniCalc3 is designed to be a small unobtrusive calculator for your Windows desktop that emulates those \$4.99 calculators that work but aren't fancy. All that will show is the title bar as that is the output window. You can minimize and move the caption bar but you cannot maximize it or change it's size. You input to the calculator using the numeric keypad and various other special keys. MiniCalc3 defaults to running on top of other applications but can be set to run underneath.

To run MiniCalc3 you require **VBRUN300.DLL** which is available on Compuserve and other online services.

Active Keys for MiniCalc3

| | |
|-----------|--|
| 0 to 9 | number input keys |
| . | decimal place |
| / | divide |
| * | multiply |
| + | add |
| - | subtract |
| Enter | equals |
| Backspace | correct entry |
| Esc | clear all entries |
| Tab | after entering a number this key changes it's sign (+/-) |
| Pg Up | runs MiniCalc3 on top |
| Pg Dn | runs MiniCalc3 underneath |

MiniCalc3 is being released as shareware. If after trying it you decide you wish to continue using it, please send \$10 to the address below:
