1.2 Why this CD?

```
     Why this CD?
```

This CD is developped from the problem that there is no general survey with
demo versions of commercially distributed software which would help one´s
buying descision for a special product.

Even though it is possible to get demoversions of several software out of a
mailbox or e.g. out of the AmiNet usually it is linked with a lot of time
and perhaps money until you found the right product.

Furthermore not everybody has a modem or the possibility to get things out
of the AmiNet. Often you don´t know of which programs there are demoversions
available or what software is offered for our computer.

Also we want to signal and help to survive the Amiga as long as possible. As
long as software for our computer will be bought as long there will be new
and more efficiency software.

Therefore: Buy your software and don´t pirate it!!!

1.3 Copyright

                   Copyright

The copyright of each program on the CD is owned by its author or software
company.

The copyright of this CD-compilation is only owned by:

                   Logic Creations
                   Rankic & Schneider GbR
                   Prof.-Drueck-Str. 38

                   D-72666 Neckartailfingen

Full-Live-Versions

The complete versions of software (marked with the Icon "Full-Live-Version")
are not allowed to be copied or given away. The right to use this software
is exclusive with the buyer of this CD. Only he/she has the right to get new
released complete versions by updating at inexpensive conditions.

Claims

This CD is sold "like it is". We compiled this CD and installed the software
with our best knowledge and conscience. However we cannot guarantee that the
software on the CD will work completely. We cannot be claimed to certain
results or anything else of the CD.

However we would be happy to get notes about errors or suggestions to
increase the functionality and the comfort of the user of this CD. But bugs
and improvement suggestions have to be send to the manufacturer and not to
us.

For damages of the direct or indirect use of this CD we cannot be made
reliable.

Legitimation of the software

We thank

all~companies

which put their demoversions at our disposal. From
this companies we also got the permission to use their demosoftware on this
CD.

However a lot of companies didn´t answer our repeated request for
demoversions.

Nevertheless we wanted to give an as much as possible complete overview
about the Amiga software available at the present and at the past. Therefore
we got the demoversions of this companies out of several nets and PD
collections and we installed them on this CD.

We start out that the software which is on several nets and PD collections
on the market is allowed to be copied free (of course with consideration of
the copyright).

If one of this companies has objections against publishing their software on
this CD we ask for a message.

(But we cannot imagine that because it´s free advertisement for their
software companies). ;-)

In that case we won´t put this program at the following reprints on the CD.

1.5   Making programs working

How to get a program working?

Nearly all programs on this CD, which are installed to run, need assigns,
certain files in certain directories, their own fonts and libraries and so
on, which they have to find in order to run correct.

Therefore we created setup-files to put the needed assigns into the system.
Don´t worry, there will be no change in the system, after the reset
everything will be gone.

We put two ways to integrate the assigns into the system on the users
disposal:

1. The costly method:

Before starting a program the setup-files have to be opened separately by
double-clicking them.

You have to start the 8-cornered grey icons marked with 'Assign' and called
"programname-setup". The icons are in the respective program directory next
to the icon of the main program.

Furthermore the "Find-All" icon has to be opened and the libraries, fonts,
etc. have to be found in the programs of the CD. (You have to do this only
once, after you put the CD inside, as this setup is valid for all programs
at the time).

Additional the RexxMast has to be activated if you start a programe which
needs it.

Advantage:

There are not so many assigns integrated in the system. There are only the
assigns of the programs needed of the system.

Disadvantage:

You have to open the respective setup icon before starting the program. (If
you forget that, some programs will even crash).

2. The easy method:

Just start the 'GLOBAL-ASSIGN' after putting the CD into the drive. Then all
assigns and allocations for all programs on the CD will be opened
automaticaly. (The icon "Find-All" has not to be opened as this batch-file
is part of the GLOBAL-ASSIGN).

The RexxMast is activated automatically through this script, too. You don't
need to start it separately.

Advantage:

You don´t have to think about everything as it is working after starting the program.

Disadvantage:

You have a lot of assigns in the system. This needs more memory than the first reader but it is in any case more comfortable.

We recomend the second method!

Here is an other suggestion:

As a textviewer the program 'Most' from Uwe Roehm is used.

If a read-me-file is opened there will be searched for 'most' first in the C:-directory of the boot-partition and then in the C:-directory of the CD.

As the access time of the CD-ROM-drive is not very fast compared with hard-discs it is clear that after some time it gets on your nervs to wait until 'most' and afterwards the text-file are loaded.

If you want to speed up the access on 'most' you have to copy 'most' into the C:-directory of the boot-partition. There it will be found faster and be faster at your disposal.

1.6 Notes for the user

                    Notes for the user

        1.
            How~to~get~a~program~working
                    2.
            Which~problems~are~possible?
                    3.
            The~'Compressed'~directory

1.7 The Compressed directory

The use of the packed files

What?

In the 'Compressed' directory you can find packed demoversions of most

demoversions, installed on the CD.

Why?

This directory is to enable the user to install the software he/she wants to
test more detailed on his/her hard-disc.

How?

You have to unpack the packed files with the respective packer and to
install each demo with the instuctions for installation. Because of legal
reasons the needed packer cannot be found on this CD.

Why?

In very few cases it is enough to copy only the complete program directories
of the installed demo-versions from the CD on your hard disc partition.

1.8 Problems

Problems with this CD?

Using this CD there shouldn´t be any problems.

This CD was tested by several betatesters on several computer configurations
before the CD was pressed. All mistakes of the instalation or configuration
should be removed.

Problems with ready installed software?

There could be problems with some programs (luckily this are only a few).

Some are not a 100 % conform to the system or don´t stick to the given rules
and spezifications.

e.g. you can´t close them properly or they leave opened windows on the
workbench after ending and so on.

Very view programs don´t run 'out of the CD' because they try to write on
the data carrier on which they are. You can find a note in the read-me-files
of this programs. In that cases you have to instal it on your hard-disc.

An other solution for this problem could be to copy only the whole drawer of
the program to RAM or to HD and to run it from there. But, this solutions
works only if TGAE is inserted and assigned.

Most of the programs try to write on the CD but go on normally after an
error message.

Which configurations are needed?

This depends on each program. However OS2.x and 1MB are the minimum (a lot
of programs shouldn´t work with this configuration). Better would be OS3.x
and 4MB or more. The more MB and Mhz the better.

We installed the demos to run with a possible low configuration.

Installing some programs we had the choice between PAL- and
NTSC-installation. We took the NTSC-installation as this one runs more
possible on PAL-Amigas as vice versa.

Where ever possible we also installed not-FPU-program versions as not
everybody has a FPU.

Who wants to use this demos at the optimum of his/her computer configuration
should unpack the packed files ot of the compressed directory and install
them on his/her hard-disc.

1.9 Future

                        The future

What will come after this CD?

We are already planning a following CD, which will contain demoversions of
commercially distributed software. We have already confirmations from some
companies, which are none existend on this CD (for time reasons) because
they are providing us with some 'specials'. We don´t want to say more at
this stage. :-)

Opinions to this CD

We would be happy about suggestions and criticism. Please write or fax to
us, what we could have made better.

Aufruf

Herewith we would like to call up all sofwaredevelopers of commercially
distributed software to send us more demoversions of their software (new
programs or/and improved versions). Of course games are welcome, too.

The second CD should be released ca. beginning-middle '96. (There is enough
time to make something)

Here~
                        our~address~and~number
                        !

1.10 Thanksgiving

1.12 Content of this CD

                        Content of this~CD

This CD contains software demoversions of all areas, for example music,

graphics, applications, utilities, ect.

Each demo contains many datas, which can be used with the demos or which are
constructed with certain software (e.g. pictures and animations).

Therefore we got the allowance of several companies to take full versions of
their software on the CD. These are the following:

                    Imagine~2.0
                    *

                    Scala~1.13
                    *

                    Vista~Pro~1.0
                    *

                    Distant~Suns~4.0
                    *

                    Clarissa~1.1
                     (Special version)*

                    The~Edge~1.721
                    *

Steuerfuchs '93

Distant Suns and VistaPro are for the buyers of this CD fully upgradeable:

AMIGA UPGRADES

PRODUCT	MEDIA	RETAIL PRICE	UPGRADE PRICE
Distant Suns 5.01	disk	$ 99.95	$35.00
Distant Suns Macintosh	CDROM	$149.95	$39.95

This dazzling desktop planetarium lets users explore the heavens over a span
of nearly 15,000 years! Click on any object in the virtual sky for instant
access to a window full of information. Display star names; show photos of
Mars, outline the constellations, identify deep sky objects such as
galaxies, star clusters and nebulae. Distant Suns 5.01 features AGA support;
3-D planet rendering, 8,000 stars from the Hubble Guide Star Catalog;
intuitive tool pallette; additional menu choices; greater selection af AREXX
commands; and the ability to read the Hubble Guide Star Catalog (16 million
stars) from the Macintosh Distant Suns 2.0 CDROM.

Vistapro 3.0	disk	$99.95	$35.00
Vistalite	disk	$69.95	$29.00

Vistapro, the ultimate 3-D landscape generating tool, lets you create and
animate fantastic 24 bit photorealistic 3-D scenes IN SECONDS! Vistapro
renders your image so fast it will make your head spin!! Real data from the

USGS and NASA make visits to Mars or hundreds of places on earth a reality!
Personalize your world with tree's vegetation, rivers, lakes, waterfalls,
clouds, snow, haze, roads and buildings. You can even generate left and
right images for 3-D viewing. You could even project what Mars would look
like when we eventually colonize it!! Move over Steven Spielberg! Supports
NTSC, PAL, VGA, EURO36, Super72, DBL, NTSC DBL, 3 and 4 bit plane DCTV,
FireCracker and Ham-E, Toaster, IV-24, Opalvision, and Harlequin. Additional
landscape sets are available..please contact us for a list. Vistalite is a
low memory version of Vistapro and only requires 2MB RAM! A number of
features have been simplified and a 'Tiny' size DEM landscape feature has
been added.

Makepath 1.0	disk	$39.95	$19.95
Terraform2.0	disk	$39.95	$19.95

Two impressive utilities to make your explorations of Vistapro landscapes
even more mind-boggling. Makepath, a powerful advanced animation tool, lets
control the motion, aacceleration, bank and pitch of a cruise missile,
helicopter, glider, motor bike and dune buggy. Zoom through the Grand Canyon
in a cruise missile; explore Yosemite on a leisurely motor bike ride; hover
over Crater Lake in your helicopter; or silently fly through Bryce Canyon
in your glider. You could even ride dune buggy over Olympus Mons on Mars!
The choice is yours! Terraform is the landscape editor for Vistapro. You can
modify an existing landscape or create your own. Add dams to rivers, roads
winding around mountains, or put your own face on Mars! Use the tools to
build volcanoes, flatten or roughen areas, and paint elevations. Version 2.1
now contains Cut, Undo and several types of Paste.
