

## ***New York Time Capsule 1994, Final Edition***

Congratulations on your purchase of the New York Time Capsule 1994!

Please return your registration card to receive valuable offers and updates.

What follows are some troubleshooting tips that solve problems that you may encounter.

We hope that you enjoy your copy of the New York Time Capsule 1994.

-- The Vicarious Team

### ***MANUAL INSTALLATION OF THE NEW YORK TIME CAPSULE 1994 ON A WINDOWS COMPUTER***

If for any reason, you are unable to install the New York Time Capsule using the standard installer included with the product, you can install the product manually using the following instructions:

1. Insert the New York Time Capsule CD-ROM into your CD-ROM drive.
2. Run Program Manager. From the "File" menu, select "Run". Type in "X:\WINDOWS\QTM\SETUP", where "X:" is your CD-ROM drive. This will install QuickTime for Windows version 2.0.

PLEASE NOTE: The QuickTime for Windows 2.0 installer may give you the opportunity to either "Delete" or "Skip" previous versions of QuickTime for Windows. We STRONGLY recommend that you "Delete" previous versions; allowing previous versions of QuickTime to remain on your hard disk may cause problems with using New York Time Capsule.

3. Run File Manager. Go to the "File" menu and choose "Create Directory". When prompted, create a directory on your hard drive called "nytc94". For easiest access, put the directory in the root of your hard drive by typing a backslash before the name, i.e., "\nytc94".
4. Highlight the "nytc94" that appears in the left side of the File Manager
5. Select the CD-ROM drive from the File Manager and go into the "windows" directory. Select all the files and directories in the "windows" directory by clicking the first file in the list, moving to the bottom of the list using the scrollbar, and holding down the shift key while clicking on the last file in the list. Drag all these files to your hard drive. (Note: if you are low on disk space, you don't need to install the files "AUTOPLAY.EXE" or "\_UNSETUP.EXE".)
6. Select all "nytc94" files as above and choose "Properties" from the "File" menu. Click in the box next to "Read Only" until it is clear and then click "OK".
7. Switch to the Program Manager. In the "File" menu, select "New". In the dialog box, choose "Program Group" and click "OK". Type in "New York Time Capsule 1994".
8. In the "File" menu, select "New". In the dialog box, choose "Program Item" and click "OK". In the "Description" field, type "New York Time Capsule 1994". In the "Command Line" field, type the path to the root. If you put the program at the root, type "c:\nytc94\NYTC94.exe". Click "OK".
9. An icon will be created for the "NY Time Capsule 1994". Click on this icon to run the New York Time Capsule 1994.

### ***SEARCHING FOR SPECIAL CHARACTERS***

The current version of the search engine ignores special characters. For instance, you cannot search for "N.Y.". Instead, try using other descriptive key words in your search like "New York".

### ***SINGLE-SPEED CD-ROM DRIVES PROVIDE SUB OPTIMAL VIDEO PERFORMANCE***

Customers with single-speed CD-ROM drives may find that video performance is occasionally chunky or less smooth than would be optimal. Customers with double-speed (or faster) CD-ROM drives should find no problems with the video.

### ***DIAMOND SPEEDSTAR PRO VIDEO CARD PROBLEMS--WINDOWS ONLY***

There are several known problems with the Diamond Speedstar Pro video card. One problem causes some special effects (wipe left, explode, implode such as when you click on "Help") to crash and some errant vertical lines to appear on-screen. The second problem with the Diamond Speedstar Pro video card is that occasionally, heavy black vertical lines (|||||) will appear in the headline area of a Moment. This problem happens intermittently. Thirdly, the system may crash when a photo or cartoon is viewed via the Related Info window.

We have reported these problems to Diamond and you may be able to contact them for a new driver. In the meantime, these problems only occur in 256-color mode and can be resolved by switching to 65-thousand or 16-million color mode.

If you can only run in 256-color model, you may be able to work around the crashes caused by special effects using the following steps:

1. Double-click on the "Edit NYTC94 INI" icon in the Program Manager in the folder where you installed the New York Time Capsule 1994.
2. Edit the file by removing the semicolon (";") in front of the line reading "UseTransitions = 0". Then save the file and exit.

### ***AFTER DARK™ INCOMPATIBILITIES WITH NEW YORK TIME CAPSULE--WINDOWS ONLY***

Berkeley Systems' After Dark™ screensaver can cause incompatibilities with the New York Time Capsule. These include system crash when you click to bypass the introductory video and severe performance degradation overall. To work around these problems, disable or close After Dark before running New York Time Capsule 1994. On some systems, you may have to remove After Dark completely (including all device drivers) for the New York Time Capsule 1994 to run properly.
