

THE INTERNET RAILROAD

<http://park.org/About/InternetRailroad>

The Internet Railroad is the most ambitious piece of infrastructure in the Internet 1996 World Exposition, with the goal of building a backbone circling the world at 45 million bits per second. An important initial step for the railroad was made when U.S. Vice President Gore formally linked Expo 96 to the recent G-7 agreements for a series of projects to build a global information infrastructure.
