WinExec Component
Version 1·0

Designer   Craig Ward (100554,2072)
Date   1/9/95

Function   Returns text associated with value returned by WinExec function

****

My Terms

This product has been released into the public domain, **FREE!** I want no money in return, and you are welcome to make as many copies, and distribute them, as you like. **However,** I would appreciate some feedback, especially bugs or imporovements that you think that I should make.

Use

This is a dead simple component (and I mean that emphatically!) which basically returns the text associated with a value (less than 32) returned by the WinExec function. The function that is being called is **custCheckWinExec**. For example (assuming that you have installed a TCheckWinExec component onto your form):

```
procedure.......
var
s: string;
i: integer;
begin
i := WinExec('c:\windows\write.exe',SW_SHOWNORMAL);
 if i < 32 then
  begin
   s := CheckWinExec1.custCheckWinExec(i);
   showMessage('Error message:'+s);
  end;
end;
```

Files

The WINEXEC.PAS file must be placed in the \delphi\source\samples directory, and then added to the component library (see delphi documentation for more details).

Conclusions

I hope that it helps. **Have fun and don't forget to give me some feedback!**

"Remember, the force is with you..."
