• Icon Wrapping: Icon wrapping forces the startup icons to wrap around the screen.   It also prevents inits which clear the screen from wiping out the startup icons.   Requires Startup Reorder to be enabled.

• Show Startup Icons: If this option is disabled, Conflict Catcher will not display any startup icons (other than its own).   Both this and "Hidden Icons" require Icon Wrapping to be enabled.

• Show Hidden Icons: Conflict Catcher will display icons for those startup files which load without display icons themselves.
