• Warn Before Saving Sets: Disable this option if you don't wish to be warned before Conflict Catcher saves changes made to sets.

• Display Set Name: Conflict Catcher automatically selects the last set chosen when it is opened. This is automatically disabled if you turn off the set warnings.

• Enable New Startup Files: When selecting a set, there can be files that were not installed when the set was created.   With this setting enabled, those files are left alone.   If you turn off this option, those "unknown" startup files are disabled.
