• Create Link: Allows you to create a new Link.   You will be asked for a name for the new link.   By default, the link mode will be set to "Grouped."

• Remove Link: Allows you to remove the selected Link.

• Import Links: This feature will import links from a link file created by Conflict Catcher.   Any links that have the same name as existing links will be ignored.

• Export Links: You can export all of Conflict Catcher's Links to a link file.   This can be useful in maintaining backups, or sharing links between multiple machines.
