DUMPSTER

Dumpster is a Shareware utility that allows you to choose a pair of icons to be installed into your system file and replace the standard trash icons, without using Resedit. Click on the arrows to toggle through the various trash cans and then click 'I' to install. Changes will not take place until you restart. You can import and export the trash icons. You can also have many different trash files. The program is fairly simple to use. Enjoy.

I created all the trash cans included with the demo, and I have many more that come with the registered version. I take no responsibility other than required by law. So please always back up your system file before altering.

I have used it with system 7.0 & 7.1 and have had no problems.   It will only work with system 7.00   or greater and works best with color monitors. The 'Dumpster' import export features are incompatible with extension   'SFVol INIT1.5'. Dumpster can be used with   'SFVol INIT1.5' but will crash if you try to import or export.

To register Dumpster send $20.00 (check   or money order) to:
