SERIES NOTE

Current Bibliographies in Medicine (CBM) is a continuation in part of the National Library of Medicine's Literature Search Series, which ceased in 1987 with No. 87-15. In 1989 it also subsumed the *Specialized Bibliography Series*. Each bibliography in the new series covers a distinct subject area of biomedicine and is intended to fulfill a current awareness function. Citations are usually derived from searching a variety of online databases. NLM databases utilized include MEDLINE®, AVLINE®, BIOETHICSLINE®, CANCERLIT®, CATLINE®, HEALTH, POPLINE™ and TOXLINE®. The only criterion for the inclusion of a particular published work is its relevance to the topic being presented; the format, ownership, or location of the material is not considered.

Ordering Information:

Current Bibliographies in Medicine is sold by the Superintendent of Documents, U.S. Government Printing Office, P.O. 371954, Pittsburgh, PA 15250-7954. To order the entire CBM series for calendar year 1992 (14 bibliographies), send $41.00 ($51.25 foreign) to the Superintendent of Documents citing GPO List ID: CBM92. To order the series for 1993 (approximately 7 bibliographies), send $24.00 ($30.00 foreign) citing GPO List ID: CBM93. For your convenience an order blank is given inside the back cover. Orders for individual bibliographies in the series ($3.25, $4.06 foreign) should be sent to the Superintendent of Documents citing the title, CBM number, and the GPO List ID given above.

Internet Access:

The *Current Bibliographies in Medicine* series is also available at no cost to anyone with Internet access through FTP (File Transfer Protocol). FTP to nlmpubs.nlm.nih.gov and login: as nlmpubs. The index file in the "bibs" directory provides information on the bibliographies available.

Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through September 30, 1993.

AUDIOVISUALS IN DERMATOLOGY

Dermatology briefly defined is the medical specialty concerned with the diagnosis and treatment of diseases of the skin, including the relationship of the skin to systemic diseases. Because the pathology of the skin is directly visible, dermatology is a specialty which is most dependent on a physical diagnosis. Skin diseases show characteristic patterns, locations, and morphologies which provide clues to experienced physicians in making diagnoses. Because the visual aspect is so important in dermatology, audiovisual media are the perfect tool to provide extensive exposure of dermatologic conditions.

This bibliography was developed as an outgrowth of a collection assessment project in dermatology which the National Library of Medicine (NLM) undertook in 1990. NLM used existing bibliographic compilations in dermatology and other assessment techniques to evaluate its literature holdings, but no comparable bibliographic tools could be identified to assess the NLM audiovisual collection.

The purpose of this publication is to provide a comprehensive bibliography of commercially available audiovisual programs in dermatology. Two bibliographic databases were searched in its compilation: NLM's AVLINE database and the RLIN database of the Research Libraries Information Group. Productions entered in these databases through September 1992 are included. Also included are citations to individual issues of the serials *Video Journal of Dermatology* (Spring 1986 through Spring 1992) and *Dialogues in Dermatology* (October 1991 through April 1992). The earlier issues of the *Dialogues...* are cited in the *Dialogues in Dermatology Fourteen-Year Cumulative Index*, September 1977 to September 1991, available from the publisher of the series. Although the search for dermatology audiovisuals was not restricted by language, all of the references are in English.

Arrangement of this bibliography is by subject, primarily by disease state; a citation may appear under more than one subject. Most of the material selected for it was produced for professional application or education; however, some health education material, which could be used for patient education, was included. Material on the subject of plastic surgery was deliberately excluded. Many older items listed may not be available from the publishers indicated, but may be found in existing library or departmental collections.

The compiler wishes to thank Dr. Charles Schneiderman of the Educational Technology Branch, Lister Hill National Center for Biomedical Communication, for his assistance as subject advisor for this publication.

SEARCH STRATEGY

NLM's AVLINE was one of the sources searched in preparing this bibliography in the CBM series. To assist you in updating or otherwise manipulating the material in this publication, the strategy used for the AVLINE database is given below. Please note that this search was broadly formulated and irrelevant citations edited out prior to printing.

SS 1 = EXP SKIN DISEASES OR EXP SKIN

SS 2 = ALL DERMA: OR ALL CUTANE:

SS 3 = EXP ECTOPARASITIC INFESTATIONS OR EXP LEISHMANIASIS

SS 4 = EXP LEPROSY OR ALL SYPHIL: OR ALL LUPUS (MHF)

SS 5 = WOUND HEALING OR RASH (TW) OR RASHES (TW)

SS 6 = (CA) ALL WR:

SS 7 = 1 OR 2 OR 3 OR 4 OR 5 OR 6

GRATEFUL MED®

To make online searching easier and more efficient, the Library offers GRATEFUL MED, microcomputer-based software that provides a user-friendly interface to most NLM databases. This software was specifically developed for health professionals and features multiple choice menus and "fill in the blank" screens for easy search preparation. GRATEFUL MED runs on an IBM PC (or IBM-compatible) with DOS 2.0 or a Macintosh, and requires a Hayes (or Hayes-compatible) modem. It may be purchased from the National Technical Information Service in Springfield, Virginia, for $29.95 (plus $3.00 per order for shipping). For your convenience, an order blank has been enclosed at the back of this bibliography.

SAMPLE CITATIONS

Citations in this bibliographic series are formatted according to the rules established for *Index Medicus*®*. Sample journal and audiovisual citations appear below. For journal articles written in a foreign language, the English translation of the title is placed in brackets; for monographs, the title is given in the original language. In both cases the language of publication is shown by a three letter abbreviation appearing at the end of the citation. Note also that a colon (:) may appear within an author's name or article title. The NLM computer system automatically inserts this symbol in the place of a diacritical mark.
