WebDesigner Online Help

Welcome to WebDesigner Online Help

WebDesigner is a Windows95 HTML text editor. WebDesigner supports HTML 3, Netscape and Microsoft Internet Explorer specific tags.

WebDesigner offers you a easy way of making WEB-pages.

HELP: I'm a programmer, not a writer, if someone would like to help me write a more accurate and better help file for WebDesiger, PLEASE let me know.

Good data processing procedure dictates that any program be thoroughly tested with non-critical data before relying on it.   The user must assume the entire risk of using the program.   ANY LIABILITY OF THE SELLER WILL BE LIMITED EXCLUSIVELY TO PRODUCT REPLACEMENT OR REFUND OF PURCHASE PRICE.

The author

Just a little about me.

I'm 29, and working as programmer. I've got a girlfriend, we got a son on the 9th of October 1995.

 WebDesigner is made available to you as freeware.

If you want, you can reach me at:
srabol@vip.cybercity.dk or
scsr@pip.dknet.dk or have a look at my hompage
http://www.cybercity.dk/users/ccc2277/home.html, where the latest version of WebDesigner is available.

Reference

For more information on the HTML language, please look at the following WEB or FTP -sites

WebDesigner Menus

WebDesigner offers the following menus:

[File](#)
[Edit](#)
[View](#)
[Insert](#)
[HTML](#)
[Styles](#)
[Forms](#)
[Tables](#)
[Special](#)
[Window](#)
[Help](#)

File
New command
Use this command to create a HTML page in WebDesigner.
You can open an existing document with the Open command.

Open command
Use this command to open an existing document in a new window.   You can open multiple documents at once.   Use the Window menu to switch among the multiple open documents. You can create new documents with the New command.

Close command
Use this command to close all windows containing the active document.   WebDesigner suggests that you save changes to your document before you close it.   If you close a document without saving, you lose all changes made since the last time you saved it. Before closing an untitled document, WebDesigner displays the Save As dialog box and suggests that you name and save the document.
You can also close a document by using the Close icon on the document's window, as shown below:

Save command
Use this command to save the active document to its current name and directory.   When you save a document for the first time, WebDesigner displays the Save As dialog box so you can name your document.   If you want to change the name and directory of an existing document before you save it, choose the Save As command.

Save As command
Use this command to save and name the active document.   WebDesigner displays the Save As dialog box so you can name your document.
To save a document with its existing name and directory, use the Save command.

Send command
Use this command to send the active document through electronic mail.   This command presents a mail window with the active document attached to it.   You may then fill out the To: field, Subject: field, etc., and add text to the body of the message if you wish.   When you are finished you may click the "Send" button to send the message.

Exit command (File menu)
Use this command to end your WebDesigner session.   You can also use the Close command on the application Control menu.   WebDesigner prompts you to save documents with unsaved changes.

Edit
Undo command

Use this command to reverse the last editing action, if possible.   The name of the command changes, depending on what the last action was.   The Undo command changes to Can't Undo on the menu if you cannot reverse your last action.

Cut command
Use this command to remove the currently selected data from the document and put it on the clipboard.   This command is unavailable if there is no data currently selected.
Cutting data to the clipboard replaces the contents previously stored there.

Copy command
Use this command to copy selected data onto the clipboard.   This command is unavailable if there is no data currently selected.
Copying data to the clipboard replaces the contents previously stored there.

Paste command
Use this command to insert a copy of the clipboard contents at the insertion point.   This command is unavailable if the clipboard is empty.

View
Toolbar command

Use this command to display and hide the Toolbar, which includes buttons for some of the most common commands in WebDesigner, such as File Open.   A check mark appears next to the menu item when the Toolbar is displayed.

Status Bar command

Use this command to display and hide the Status Bar, which describes the action to be executed by the selected menu item or depressed toolbar button, and keyboard latch state. A check mark appears next to the menu item when the Status Bar is displayed.

Status Bar
The status bar is displayed at the bottom of the WebDesigner window.   To display or hide the status bar, use the Status Bar command in the View menu.

The left area of the status bar describes actions of menu items as you use the arrow keys to navigate through menus.   This area similarly shows messages that describe the actions of toolbar buttons as you depress them, before releasing them.   If after viewing the description of the toolbar button command you wish not to execute the command, then release the mouse button while the pointer is off the toolbar button.

The right areas of the status bar indicate which of the following keys are latched down:

Indicator	Description
CAP	The Caps Lock key is latched down.
NUM	The Num Lock key is latched down.
SCRL	The Scroll Lock key is latched down.

Insert
Date or Time
Inserts the current date or time

Insert file
Insert a file at the current position

HTML

Links
Insert a link

Paragraph
Insert a paragraph tag

Image
Insert a image
