Internetworking : terms of art

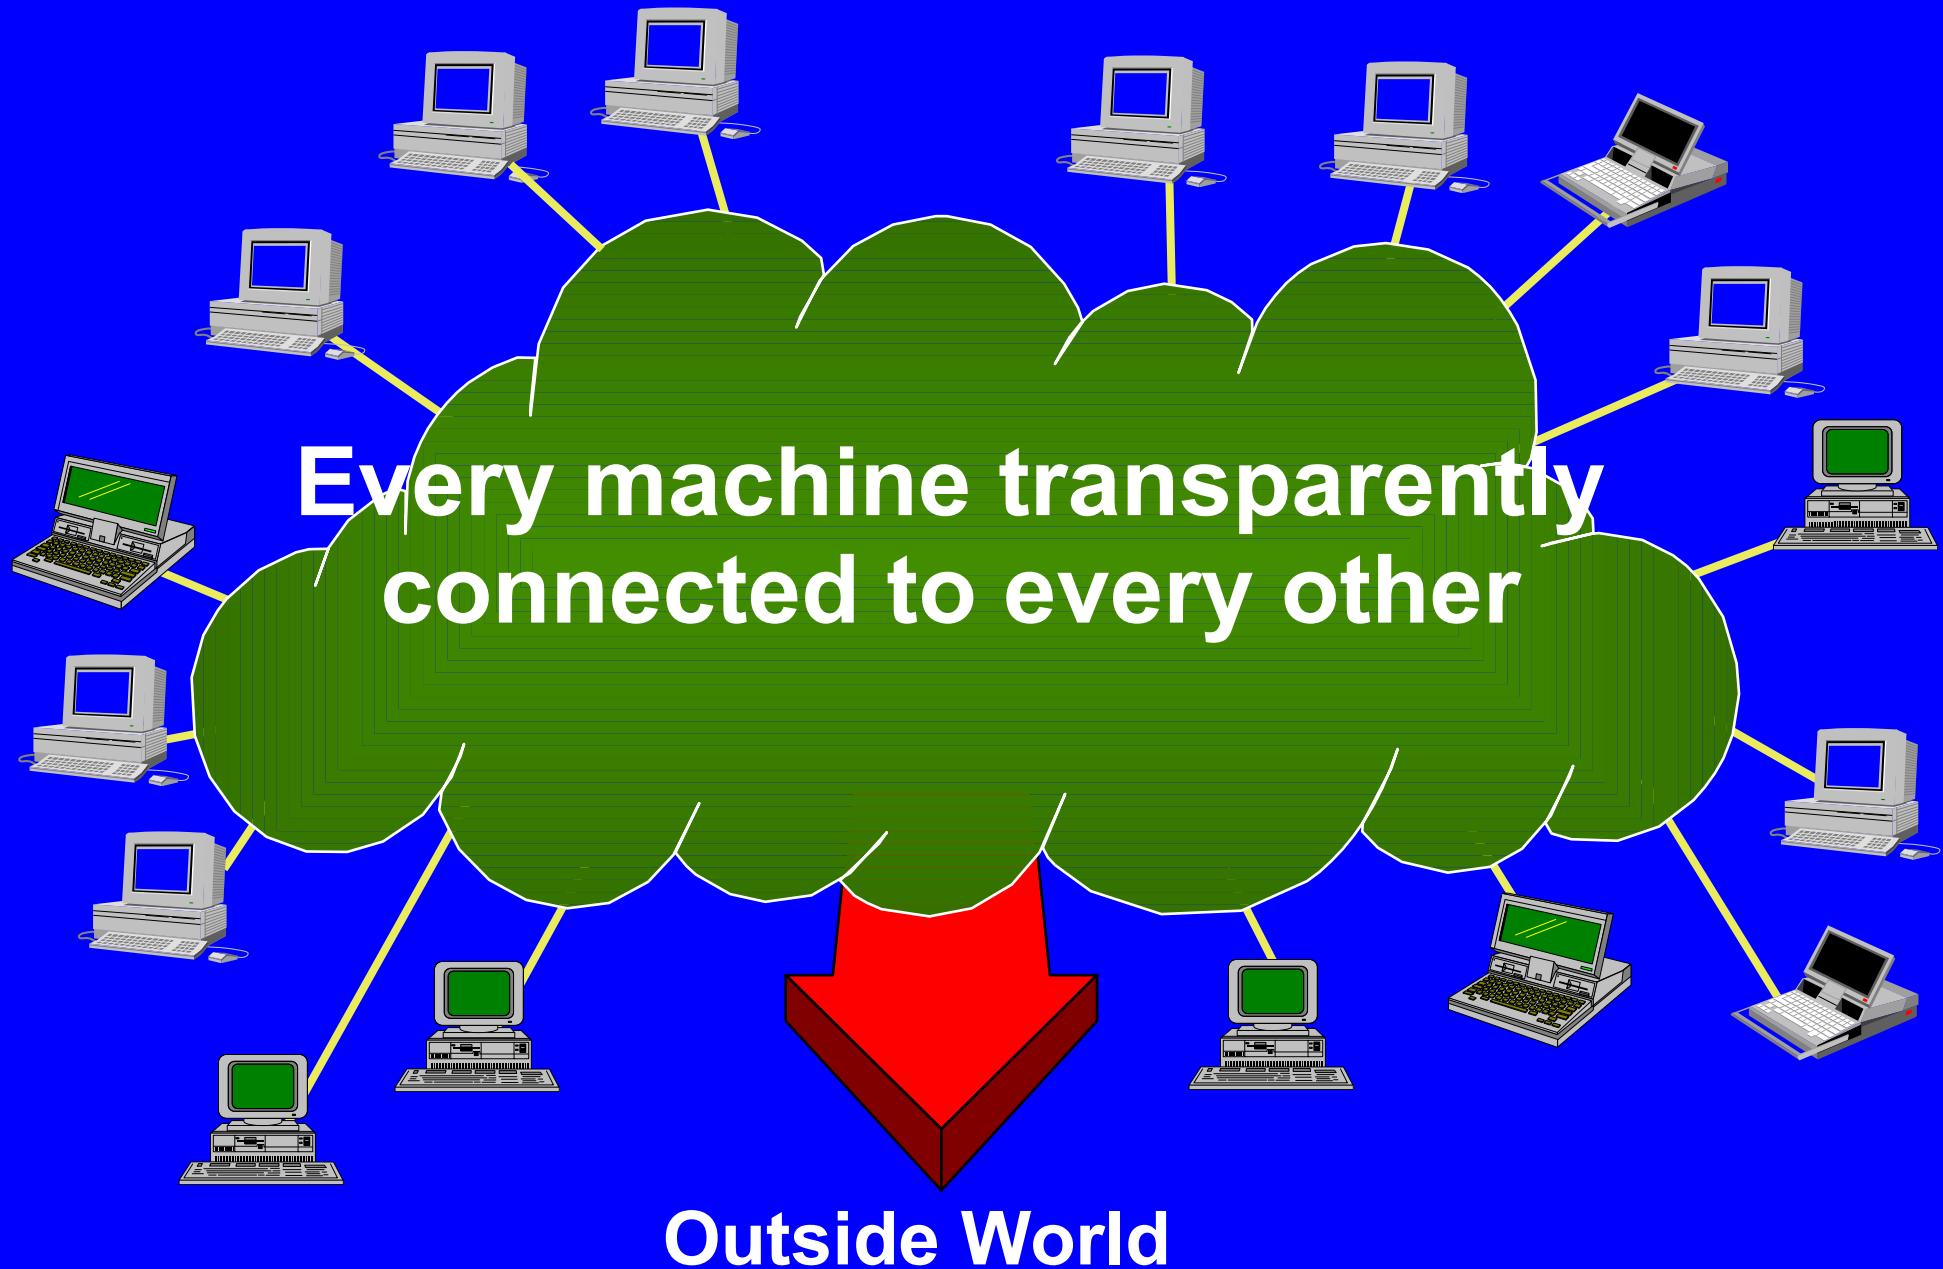

An Internet: A network of networks of computer hosts able to seamlessly communicate - usually through the Internet Protocol (IP) and services

Enterprise Internet: An Internet within an organization

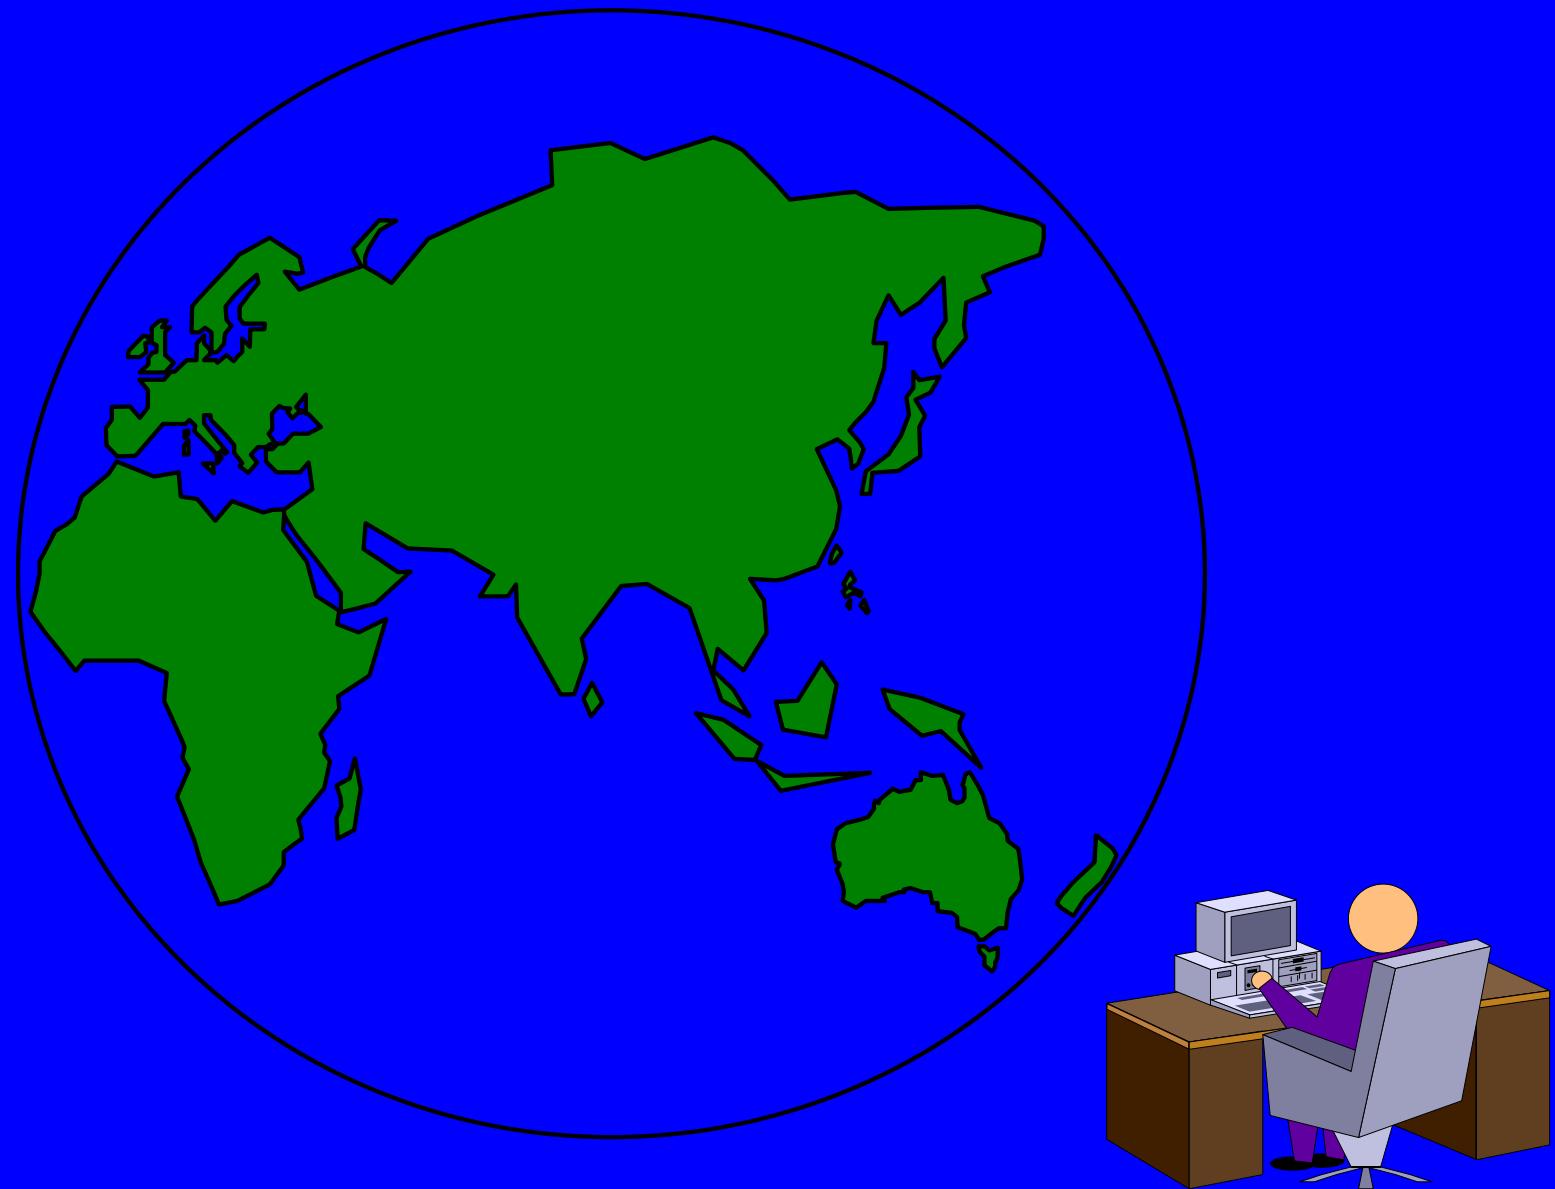

Public Data Internet: Internet services made available to the public

The Internet: More than 45,000 Internets connected together

The Enterprise Internet

Internet: Directly Reaching 3,864,000 Computers

The Internet : what is it?

The number of networks passing traffic via the major backbones

General definition: A vast global open information metanetwork (a network of networks) of computer hosts

The means by which all the world's computers are able to communicate with each other

Narrow definition (IP Internet): a set of at least 45,000 of the 60,000+ registered internetworks which are capable of routing Internet Protocol packets among themselves

Includes application level gateways (e.g., e-mail), store and forward networks, and networks using non-IP protocols

Broad definition: the IP Internet plus all connected networks capable of routing traffic to a destination device or process

Why a Revolution?

Who Uses The Internet ?

Institutions of all kinds - commercial, academic, and government

- HUL to allow their staff to collaborate with peers**
- HUL to rapidly coordinate complex, dispersed worldwide activities**
- HUL to gather and share information**
- HUL by interconnecting their enterprise networks via Internet backbone providers**

Professional communities of all kinds - especially research and development organizations

Business enterprises which specialize in providing or collecting information

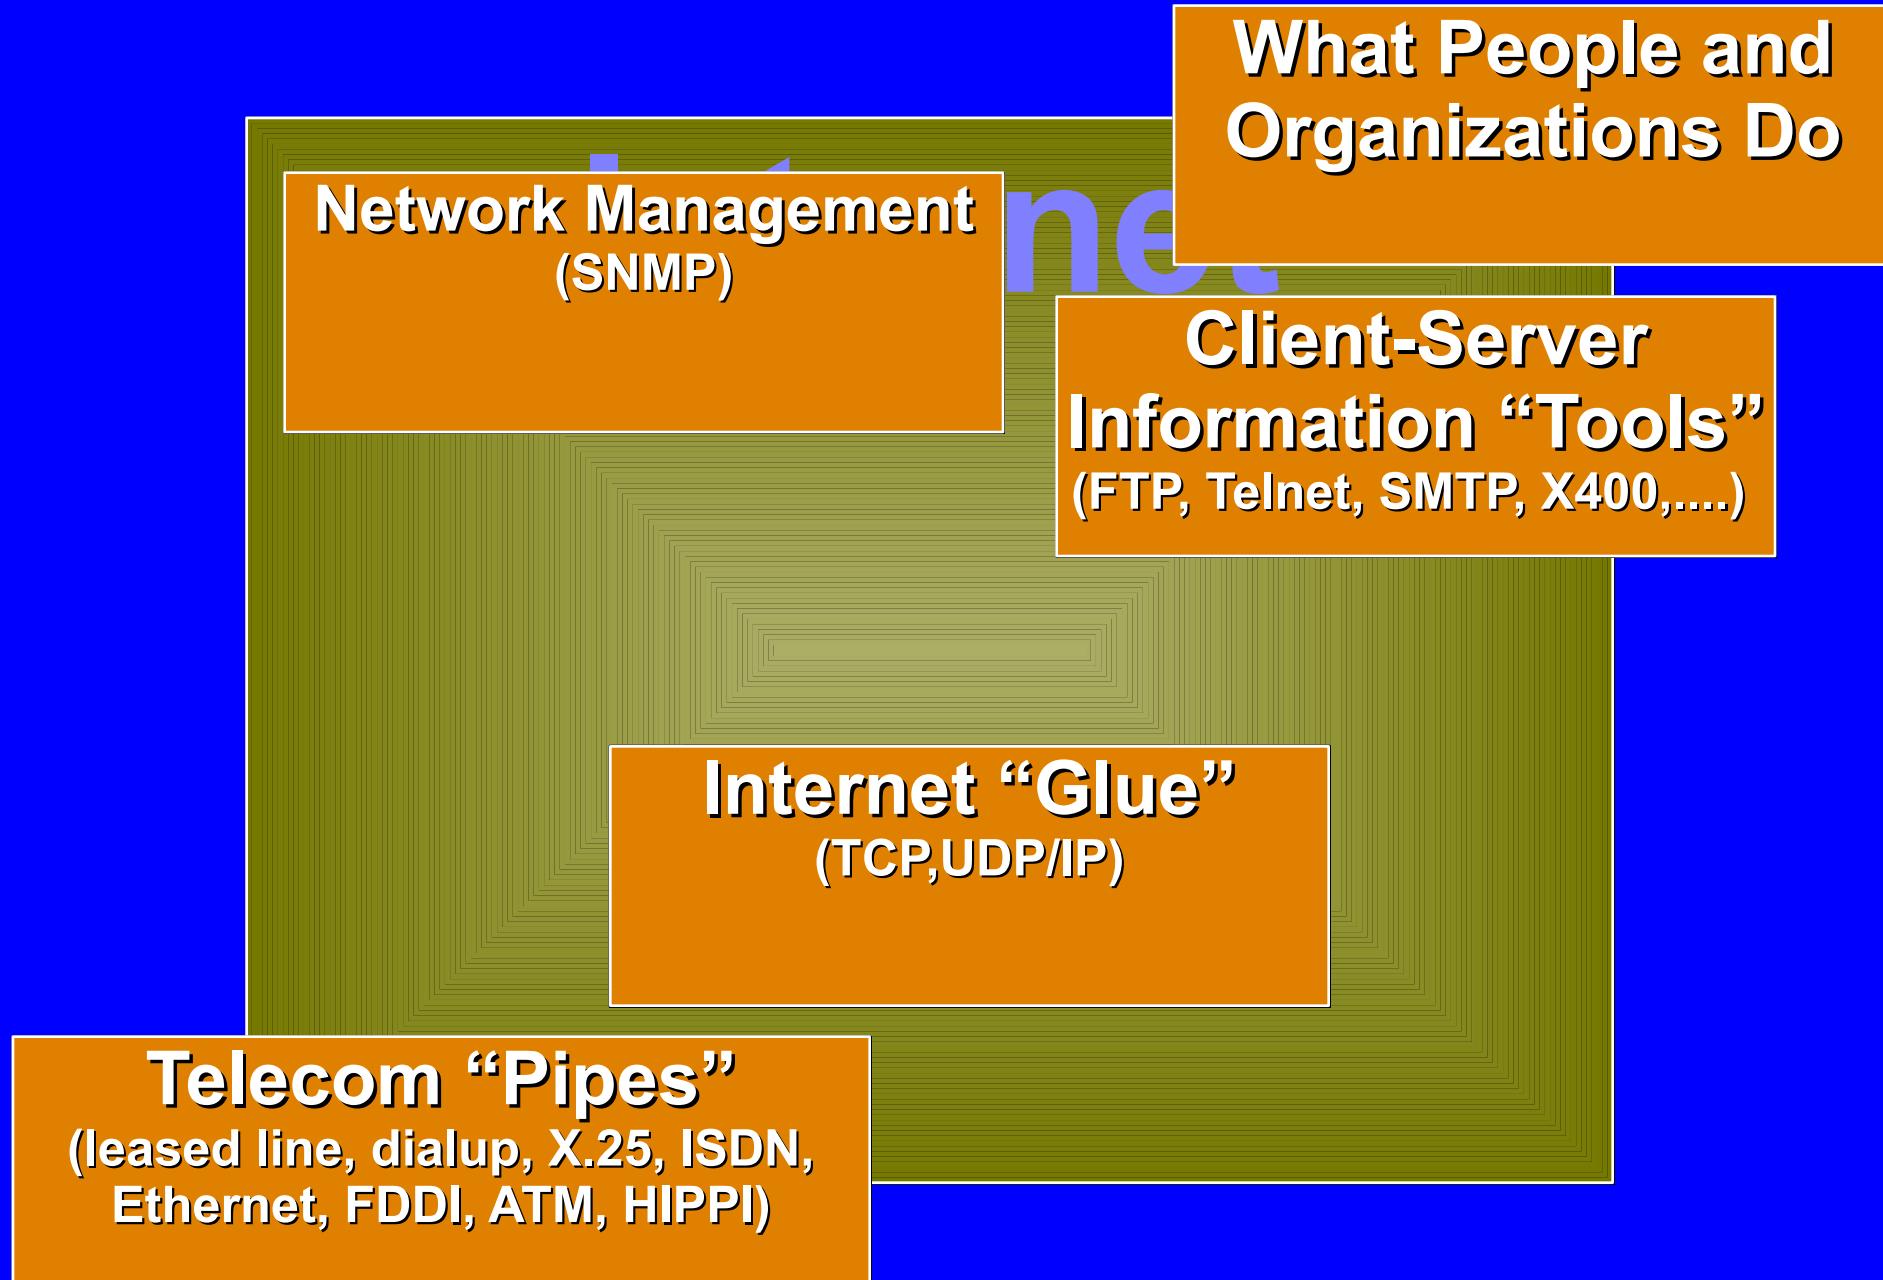

General public via local access providers and gateways to commercial public e-mail carriers and other kinds of networks

What Is Driving Internet Growth ?

- TCP/IP protocols & applications with every workstation - now every computer including PCs
- Coincided with enterprise internetworking revolution
- Standards and applications developed by the best standards process in the business
 - Fast
 - User driven and innovative
 - Standards that are proven
 - Rapidly disseminated
- User costs are very low
 - “Sender keep all” accounting
 - Inherently low-cost technology
 - Institutional cost sharing
- Massive global connectivity & professional use
- Ability to directly reach any computer and process
- Very high performance

Internet Services

How does it fit together: an information food chain

Services: Global Information Space

Allow Personal news feeds

Allow Personal browsing

Allow Finding People

Allow Group Interaction

Allow Finding Information

Allow Auto Gathering

Allow Device Monitor/Control

Basic Services

Transferring files

Universal Email

- Remote Computer Use

- Fax

Mailing Lists and Bulletin Board Services

Automated lists

- News Distribution

Interactive Information Delivery Services

Gopher

WAIS

- World Wide Web (Mosaic or Cello client)

Directory Services

WHOIS

X.500

- Netfind

- Whois +++

- CSO

- Prospero

Interactive Multiuser Services

Collage, Talk, IRC, MUD, MOO, MUSH, MUCK

Indexing Services

Archie

Veronica

- Web Worm

- online library catalog

Active Agents

Knowbots

Network Management

SNMP

- SNMP2

Emerging: *Mercantilism, Multimedia & Ubiquity*

Allow exchange of commercial business records

Allow property transactions

Allow multimedia, collaboration, entertainment and broadcasting

Allow universal access

Commercial Electronic Data Services

- Bellcore Mercantilism Project
- Educational EDI initiative
- MCC EINet initiative

Applied Encryption Technology Services

- Signature verification
- “Digicash”
- Copyright protection
- Privacy enhancement

Multimedia and Video Services

- MIME
- CU-See Me
- Mbone, Multicasting

Ubiquitous Connectivity & User Friendliness

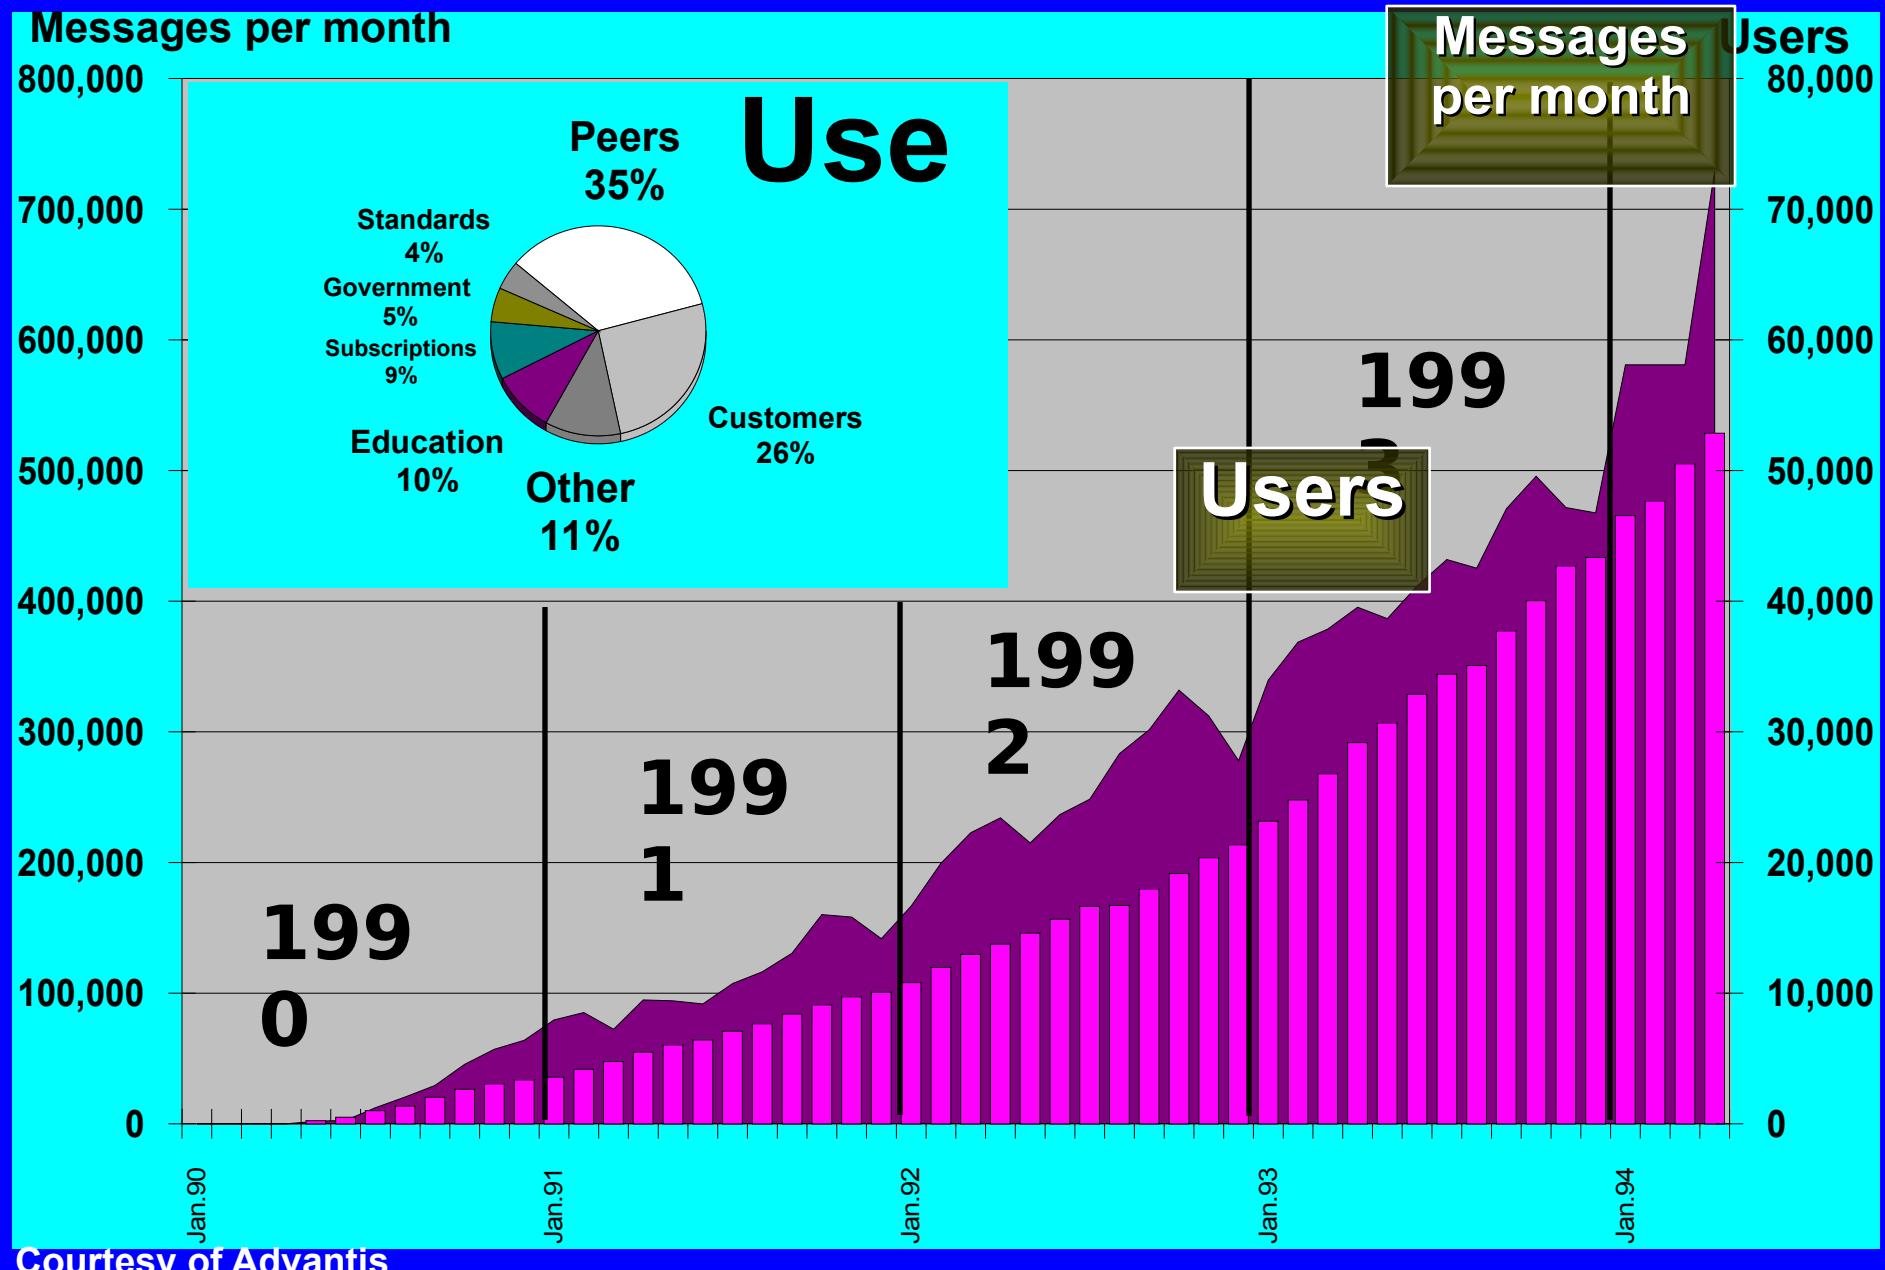

- Mobile
- Dialup
- Internet in a box
- CATV
- VSAT
- Object orientation

Current Internet Dynamics

Internet

- 43,271 (NSFNet 2 Dec 94) plus 10 % ? connected IP internets seen at other backbones
- 90 connected IP countries (1 Dec 94)
- '93 ave network growth 160 % (183 % non-USA)
- 3.864 million computer hosts; 56,000 domains (Oct 94)
- E-mail and other gateways to 159 countries (Nov 94)

IBM Corporate-Internet Gateway Profile

2001: Users = Human Population ?
