

Into His Marvelous LIGHT

A Bible Study

CHRISTIAN LIFE CENTER Interactive Ministries <http://www.clceast.org>
=====

Viewing Suggestions:

For the best viewing experience of the presentation, set your video resolution to 800x600 or 1024x768. Setting the resolution to 1280x1024 or higher will cause the video files to produce a poor picture quality upon playback.

In some scenes the blending of video with a background may not appear seamless. The blending quality varies depending upon the monitor and video card. In most cases, a high-resolution CRT monitor will produce optimal results.

Troubleshooting:

If the presentation fails on startup, close all applications and restart your computer. Microsoft's Office Shortcut Bar has been known to cause this program to fail; close the Bar in addition to other applications.

If no video files play, the computer may not have QuickTime 4 or later installed. To install QuickTime, double click on the QuickTime Installer executable located in the QuickTime Installer folder located on the CD-ROM. Follow the prompts to complete the install, then restart your computer.

If the presentation does not occur within 60 seconds, double click your CD-ROM/DVD-ROM drive in My Computer. Then, double click on the LIGHT.exe icon.

If your system fails during video playbacks, check to make sure your CD-ROM drive is at least 8X speed and your processor is a Pentium/AMD class chip with at least a 266Mhz clock speed with 64MB of RAM.

If the video playback produces no sound or retains sounds, it maybe that DirectSound is not installed on your computer. This applies to systems running Windows 95 and some Windows 98 computers with DirectX 6.1a installed. DirectX 7 and 8 are supported by this program. To find out what version is running go to Run in the Start Menu and type, "dxdiag.exe" press Enter. The DirectX Diagnostic Tool will appear. Locate "DirectX Version." (Windows NT does not support DirectSound. Users should upgrade to Windows 98/ME.) Microsoft's site provides a free download of the latest DirectSound version in the DirectX package. Download the DirectX file then double click on it to install.

If the presentation does not run, your computer maybe running Windows 95 Version "A" which does not contain necessary files for multimedia programs to run. The essential files are included on this CD for installation. The file is entitled, "dlls_installer.zip" which will update your computer for running rich-media programs. WinZip is required to run the installer.

If the video's sound is distorted on a computer running Windows 2000, view the presentation on Windows 95/98/ME. Windows 2000's system files conflict with QuickTime.
