Moopies Help

The Moopies tools are available on the left side of the screen: they look and act like the Kid Pix tools, but with a difference. Select one of the Wacky Brushes, drag it across the work area, and at the lift of a finger, you have animation! The Wacky Brush, Animated Rubber Stamps and Dancing Text tools create wiggly art that moves. Use the Electric Mixer tool to add more motion to your Moopie.

You can use the work area as a blank page, or use the "Pick a Background" command under the **Goodies** menu to get started. Use the "Save a Moopie" command under the **File** menu to save your Moopie in an editable format. Use the "Save for SlideShow" command to save your Moopie as a digital video file that can be used as a SlideShow slide, or viewed in the Wacky TV. Use the "Save as StandAlone" command to save your Moopie as a StandAlone application that will run on any compatible computer.
