Subject: Mixing WINport 4.05b Modem Servers with WINport 5.0a 32-bit Modem Servers

Release Date: 10/11/95 Total number of pages: 1 Revision: 1. 0

1.0 Situation

When you operate a WINport 4.05b 16-bit Modem Server with WINport 5.0a Modem Server in Windows NT Server, an error occurs.

1.1 Description of problem

In the event log, the following error will be displayed:

NetBIOS bind = 0x2726

1.2 Solution to problem

There is no solution, only a 'work-around' at this time. This is to:

Set the NT modem number to a number that is one higher than the highest on the old server (but still staying under the total allowed).

The error message will then stop showing in the event log.
