Race Track Web Site Project

Develop a Web site for an amateur car race event by completing the following steps:

a) Define a new Web site named Race Track in a folder named Race Track.

b) Add four files to the Web site, naming them index.htm, races.htm, statistics.htm, and location.htm.

c) Define who the target audience would be for this Web site.

d) Each Web page document should include:

- tables for arranging content
- a style sheet to format the content
- appropriate page titles
- a footer with copyright information and your name

e) The individual Web page documents should include:

index.htm: a logo, contact information, hours of operation, event admission price, and a car race Flash animation

races.htm: a list of the featured races and at least one graphic

statistics.htm: a list or previous race results

location.htm: location information and directions or a map

f) Check the spelling in all the Web page documents.

g) Add keyword meta data with at least two appropriate keywords.

h) Add description meta data with an appropriate description of the Web site.

i) Test the HTML in each Web page document for compatibility with at least three browsers.

j) Test the Web site for broken and missing links.

k) Check the Web site for Missing Alt Text and Untitled Documents.

l) Publish the Web site to a Local folder.

m) Print a copy of each Web page document from the browser.

n) In a word processor document, describe how this Web site would have to be maintained, then print a copy of the document.
