The CommScript-Font from DTP-Software Albracht, Germany, was created by

Type-Designer 2.0

just to show you the quality of fonts created by Type-Designer.
The following gives you more information about Type-Designer.

Introduction

With Type-Designer you are able to design high-quality fonts in the Adobe Type 1 and TrueType format. Type-Designer is developed for people who
- want to design Type of high-quality,
- want to convert Type 1 fonts into TrueType,
- need special symbols, like mathematicians, chemists or multi linguists,
- want to remap characters, i.e. to access special characters of a standard font,
- want to edit kerning pairs,
- want to improve the quality of existing fonts,
- just want to look how good fonts from various sources are,
- ...

Type-Designer is a fast, small and excellent utility for all kinds of font work.
The following statement about the Type 1 into TrueType conversion proves the excellence of Type-Designer:

> »Type-Designer is the only program available on the PC that correctly converts Type 1 fonts into TrueType. All other programs distort the original letterforms and lose the original hints, but TrueType fonts generated by Type-Designer are virtually indistinguishable from the original Type 1 designs – even at small sizes and low resolutions. The program is a major achievement. Everyone who is seriously interested in fonts will want it.«
>
> - Edward Mendelson, Contributing Editor, PC Magazine

System Requirements

You will need a 80286 compatible computer, Windows 3.1 and a mouse.
Also recommended are:
- a 80386 computer with Windows 3.1 running in enhanced mode for '386 PCs,
- a monitor-graphics card combination with a resolution of at least 800 * 600,

Demo-Version

A demo version of Type-Designer is available on many Internet hosts, CompuServe and some CD-ROMS.
