CD-ROM Drive Options Dialog

This is a description of the CD-ROM Drive Options Dialog. This is the dialog that is used to configure the CD-ROM Drive for use with CD Wizzard.

To get information on a function or area, click on it in the graphic below.

Copy Tracks Dialog

This is a description of the Copy Tracks Dialog. This dialog is used to copy disc information such as disc name, comments, and track names to the windows clipboard. The information can then be pasted into any windows application such as Notepad or MS Word for Windows.

To get information on a function or area, click on it in the graphic below.

Disc Maintenance Dialog

This is a description of the Disc Maintenance Dialog. This dialog displays all CDs that have been entered into the database for CD Wizzard.

To get information on a function or area, click on it in the graphic below.

Display Options Dialog

This is a description of the Display Options Dialog. This is the dialog that is used to configure the options that effect the look and feel of the main window.

To get information on a function or area, click on it in the graphic below.

Edit Disc Data Dialog

This is a description of the Edit Disc Data Dialog. This dialog displays all information about a particular CD. This dialog can be used to enter the disc name and track names.

To get information on a function or area, click on it in the graphic below.

Icon Window

This is a description of the CD Wizzard Icon. The icon is updated with the CD player's current status.

The right mouse button may be pressed on the icon to toggle PLAY or PAUSE.

To get information on a function or area, click on it in the graphic below.

Main Window

This is a description of the CD Wizzard Window. The window is updated with the CD player's current status.

To get information on a function or area, click on it in the graphic below.

Options

CD Wizzard is very customizable. The user has many options that can be set to his/her preference. The options are of the following categories:

Display Options - options to configure the main windows look and feel.

Player Options - options to configure the playing of CDs.

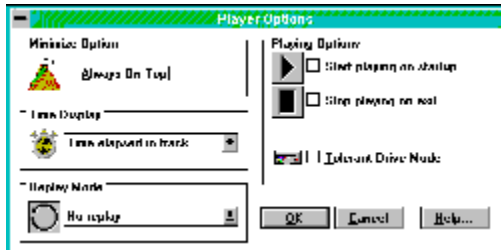

CD-ROM Drive Options - options to configure the users CD-ROM Drive.

Player Options Dialog

This is a description of the Player Options Dialog. This is the dialog that is used to configure the playing mode for CDs.

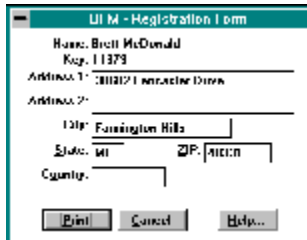

To get information on a function or area, click on it in the graphic below.

Print Registration Form Dialog

This is a description of the Print Registration Form Dialog. This is the dialog that is used to get information from the user to be printed on the Registration Form.

To get information on a function or area, click on it in the graphic below.

The screenshot shows a dialog box titled "U1 M - Registration Form". It contains the following fields and values:

- Name: Brett McDonald
- Reg. # 11373
- Address 1: 10121 Interstate Drive
- Address 2: (empty)
- City: Farmington Hills
- State: MI
- ZIP: 48334
- County: (empty)

At the bottom of the dialog are three buttons: "Print", "Cancel", and "Help...".

Program Tracks Dialog

This is a description of the Program Tracks Dialog. This is the dialog that is used to select the tracks and order of play in programmed mode. The tracks can be dragged and dropped from the track list to the programmed tracks listboxes.

To get information on a function or area, click on it in the graphic below.

Registration Dialog

This is a description of the Registration Dialog. This is the dialog that is used to register this software product.

To get information on a function or area, click on it in the graphic below.

Track Playlist Dialog

This is a description of the Track Playlist Dialog. This is the dialog that is used to select a track to play from the playlist. The user selects the track and double clicks or presses the play button.

To get information on a function or area, click on it in the graphic below.

Windows - wnd_

Always on Top

This command will cause the CD Wizzard icon to have the Always on Top attribute. This will display the icon on top of all other windows, even if it is not the currently selected application.

Background

These radio buttons allow the user to select the background for the main window. The different backgrounds are marbled, brushed aluminum, hammered steel, and gray. When a background is selected, a small sample is displayed.

Button Color

These radio buttons allow the user to select the color of the buttons on the main window. The different colors are **black**, **green**, **blue**, and **red**. When a color is selected a preview of the button color is displayed.

CD-ROM Input

These two radio buttons select the device that CD Wizzard uses to control the volume of the audio playback. The two devices follow:

CD Audio Port - this is the internal port on the sound card, usually used for internal CD-ROM drives.

Line-In Port - this is the input jack on the back of the sound card, usually used for external CD-ROM drives but, sometimes for internal drives with a line-out connector.

Please refer to your CD-ROM drive and Sound card documentation for further details on which type of setup you have.

Note: You must have a sound card for CD Wizzard to control the volume of the CD audio.

Comments

The comments field is a free form area that can be used to enter any information about the CD. It will be saved and redisplayed when that CD is edited. This area may contain a few lines of text such as the artist and/or other comments about the disc.

Data

These fields are the users return address data. The user must enter all information needed so that mail can be delivered to the correct address.

Disc Length

This is the total length of the current disc in minutes and seconds.

Disc Name List

This is the list of all disc names that have been entered into the disc database. The user will select a disc name and then press the Edit or Delete button. Double clicking a disc name will edit that disc's data.

Disc Name

This is the name of the disc currently being played. This was entered from the Edit Disc Data Dialog.

Embossed Text

Selecting this checkbox will cause all text in the disc name, track name and status bar to be embossed or have a sunken 3-D effect.

LED Color

These radio buttons allow the user to select the color of the LED Displays on the main window. The different colors are **green**, **yellow**, **blue**, and **red**. When a color is selected, a preview of the LED color is displayed.

Minutes

This is the number of minutes that may be used as the length of time to be programmed. A number between 1-99 must be entered. The spin box on the right may also be used to increase or decrease the number of minutes. After the number of minutes is entered, press the Set Tracks button to program the desired track length in minutes.

Normal Mode

The normal mode of playback will play all tracks of the CD in the original order.

Playback Mode

This is the current playback mode of CD Wizzard. It can be Normal, Shuffle or Programmed.

Program Mode

The program mode of playback will play all tracks of the CD selected by the user in the Program Tracks dialog.

Programmed Length

This is the total length, in minutes and seconds, of the currently selected tracks that have been added to the Programmed Tracks listbox.

Programmed Tracks

This is a listbox that lists all the tracks that have been programmed by the user. If a track is selected, the user may press the Clear Track(s) button to remove that track. A track may be clicked on and dragged to the trashcan icon to be removed. A track may also be removed by double clicking the track.

Replay Mode

This is the replay mode of CD Wizzard. The dropdown listbox contains the options No Replay - do not replay at all, Replay Current Track - replay the current track continuously, and Replay Current Disc - replay the current disc continuously.

Replay Mode Display

This is the current repeat mode. The three modes are none, track and disc. Track and disc will repeat either the current track or disc. The user clicks on the Repeat Mode to toggle the next mode. It can also be changed from the Player Options Dialog.

Select CD-ROM Drive

This allows users who have more than one CD-ROM drive to select a drive. All the drives attached to the system will be displayed. The user must select the drive for CD Wizzard in order to use this.

Shuffle Mode

The shuffle mode of playback will play all tracks of the CD in a random order. Each time the disc is replayed, a different order will be selected.

Start playing on startup

This checkbox indicates whether CD Wizzard will automatically start playing a CD when it is inserted into the CD-ROM drive. If selected, it will cause CD Wizzard to start playing when CD Wizzard is first executed. This allows CD Wizzard to be placed in a users Startup Group in Program Manager and have an audio CD begin playing at Windows startup.

Status Bar Display

This is the status bar display. It will display the current status of the CD player such as playing, stopped, etc. It will also display short help messages when the mouse cursor is dragged over certain areas on the window or on menu items.

Stop playing on exit

This checkbox indicates whether CD Wizzard should stop playing on exit from the program.

Text Color

These radio buttons allow the user to select the color of the text in the Disc Name, Track Name, and Status Bar areas on the main window. The color choices are **black**, **blue**, and **red**. When a color is selected, a preview of the text color is displayed.

The embossed text checkbox indicates if the text should be embossed, meaning that it would have a 3-D inset. When the option is changed, a preview of the text is displayed.

Time Display

This is the time mode display of CD Wizzard. This drop down listbox contains the time display modes for the main window. The display is in minutes and seconds. The user can select between the four modes Time Elapsed in Track, Time Remaining in Track, Time Elapsed in Disc and Time Remaining in Disc.

Time Mode Display

This is the current time mode. The four possible modes are Track Elapsed, Track Remaining, Disc Elapsed and Disc Remaining. The user clicks on the Time Mode to toggle the next mode. It can also be changed from the [Player Options Dialog](#).

Track Bar Chart

This is a bar chart showing the amount of the track that has been played. On the main window, but not on the icon window, the user can click the left mouse button on the bar chart to start playing at that point of the track.

Track Box Display

This is the display of the tracks on the disc. Any track may be selected by clicking the left mouse button on the track number. The selected track will begin to play.

All of the tracks will start out having the LED Color selected in the Display Options Dialog. The track that is currently being played will be **purple**. Tracks that have already been played will be **gray**.

Note: The Track Box Display is not shown when playing in Programmed Mode.

Track List

This is a listbox with information on the tracks of the current disc. The listbox contains the track number, name and length for each track. A user may click on a track and drag it to the Programmed Tracks listbox to program that track. A user may also double click a track to add it to the bottom of the Programmed Tracks listbox.

Track Name

This is the name of the track currently being played. This was entered from the Edit Disc Data Dialog.

Track Number

This is the display of the current track that is being played.

Track Play List

This listbox contains the order of the tracks currently selected from the disc. This order will be sequential for Normal mode, random for Shuffled mode and chosen order for Programmed mode.

Track Play List Edit Control

This edit control contains the order of the tracks currently selected for the disc. This order will be sequential for Normal and Shuffled mode and in a chosen order for Programmed mode. It will also contain the Disc name and Comments for the disc.

The user can select any part of the edit control and press the Copy button to copy the text to the windows clipboard.

Track Scrollbar

This is the scrollbar that controls the scrolling of the Track Name entry fields.

Track Time

This is the display of the current time position of the track that is being played.

Trashcan

This is a trashcan icon. It can be used to remove tracks from the Programmed Tracks listbox. This is done by dragging the track name and dropping it on the trashcan icon.

Volume Display

This is the volume level display. The user clicks the left mouse button on the volume level to change the volume. The volume can also be controlled by the Up and Down buttons. The volume display device is set in the CD-ROM Options.

User Key

This is the user key. This a user code that is built from the users name. All letters in the name are used in the key. Different spelling and capitalization produce different keys. For example, John Doe, john doe and JOHN DOE produce different keys. The user sends the Key to BFM Software which is what the password is generated from.

User Name

This is the user name. The fields are first name, middle name, and last or surname. The name must be at least eight characters long. The name can not contain blanks. All letters in the name are used for registration, different spelling and capitalization are significant.

User Password

This is the user password. The password is sent to the user in the registration package when a user registers. This password allows the user to gain full access to the software.

Tolerant Drive Mode

This checkbox is for use with CD-ROM drives that do not support SEEK commands or other CD-ROM drive commands. The user may use this option if CD Wizzard is getting errors when tracks are changed or when skipping through the tracks of the disc. The user can also try this option when miscellaneous errors are occurring during playback.

Buttons - butt_

Add All Tracks Button

This button will add all tracks to the end of the Programmed Tracks listbox.

Add Track(s) Button

This button will add all selected tracks to the end of the Programmed Tracks listbox.

Calc Key Button

This button will cause the key to be updated with a new key based on the users name.

Cancel Button

This button will cause the current dialog to be closed. All information entered on the dialog will be discarded and not saved.

Clear All Tracks Button

This button will remove all tracks in the Programmed Tracks listbox.

Clear Track(s) Button

This button will remove selected track(s) in the Programmed Tracks listbox.

Close Button

This button will cause the current dialog to be closed.

Copy Button

This button will cause the selected text in the Edit Control to be copied to the windows clipboard.

Copy Tracks Button

This button will bring up the Copy Tracks dialog on the selected disc.

Delete Button

This button will cause all information about the selected disc to be deleted.

Down Button

This button will cause the volume of the CD player to be decreased.

Edit Button

This button will bring up the Edit Disc Data dialog on the selected disc.

Edit Disc Data Button

This button will invoke the Edit Disc Data dialog for the disc in the CD player.

Eject Button

This button will cause the CD to be ejected from the CD player.

Forward Button

This button will cause the CD player to skip forward 15 seconds in the current track. If the button is held down, it will continue to skip forward in 15 second intervals.

Help Button

This button will start the windows help system with help on the current dialog.

OK Button

This button will cause the current dialog to be closed and for all information on the dialog to be saved.

Pause Button

This button will cause the CD being played to pause. If paused and the pause button is pressed again, this will cause the CD Player to play. The CD player can also be restarted by pressing the play  button.

Play Button

This button will cause the CD to begin playing. If the CD player is paused, it will start to play at the point from which it was paused.

Print Button

This button will print the Registration Form. The form will be printed to windows default printer.

Print Form Button

This button will open the Print Registration Form Dialog. This dialog will allow the user to enter the return address. Then the registration form can be printed.

Program Tracks Button

This button is used to bring up the Program Tracks dialog. This button is only active when the program playing mode is selected.

Register Button

This button will cause the users name, key and password to be validated and saved in the system. The program will now be registered and all software security will be deactivated. The program will now be fully functional.

Reverse Button

This button will cause the CD player to skip back 15 seconds in the current track. If the button is held down, it will continue to skip back in 15 second intervals.

Save Button

This button will cause all information on the dialog to be saved.

Set Tracks Button

This button will clear all currently selected tracks in the Programmed Tracks listbox and then create a list of tracks in the Programmed Tracks listbox that equals or comes as close as possible to the number of minutes entered.

Stop Button

This button will cause the CD being played to stop. The CD player will reset to the first track in the sequence. The CD player can be restarted by pressing the play  button.

Track Forward Button

This button will make the next track the current track. If the CD player is currently being played, the track will begin to play. If shuffle is selected, the next shuffled track will be selected to play.

Track Info Button

This will invoke the Track Information Dialog for the tracks currently being played in the CD player.

Track Reverse Button

This button will make the previous track the current track. If the CD player is currently being played, the track will begin to play. If shuffle is selected, the previous shuffled track will be selected to play.

Up Button

This button will cause the volume of the CD player to be increased.

Miscellaneous - misc_

CD-ROM Installation

CD-ROM Audio in Windows 3.1

This is a complete description of the support for CD-ROM Audio in Windows 3.1. This article will try to completely explain the CD-ROM environment. It will also include a detailed list of things that need to be done to use Music CDs in your CD-ROM under Windows 3.1.

The support for CD-ROM Audio is a multilevel cooperation of three levels of drivers. They are the manufacture's CD-ROM device driver, Microsoft's MSCDEX.EXE, and Windows 3.1 MCICDA.DRV. These are the three drivers required to use the CD-ROM Audio support in Windows 3.1. The manufacture's driver interfaces directly to the CD-ROM device. It talks to MSCDEX.EXE. MSCDEX.EXE is the programmers Red Book CD Audio driver. It talks to MCICDA.DRV of Windows 3.1. MCICDA.DRV supports Windows applications using CD Audio. It talks to Windows programs. CD Wizzard(TM), a windows application, talks to MCICDA.DRV.

All three drivers must be installed and configured correctly to play music CDs. When Windows 3.1 setup program is run, it checks for the presence of MSCDEX.EXE. If it is found, it will create an entry for MCICDA.DRV in your system. But, it will NOT install the driver! This must be done by the user after the installation is completed. CD Wizzard gives instructions on how to do this when it detects the situation. Following are the exact steps to add all these drivers to your system:

- A) Add your manufacture's driver supplied with the CD-ROM Drive to CONFIG.SYS.
- B) Add MSCDEX.EXE from manufacture or Microsoft to AUTOEXEC.BAT.
- C) Configure the above drivers for each other. Use the documentation from

manufacture.

- D) Go to Control Panel in windows and select Drivers Icon.
- E) Press the ADD Button.
- F) Select "[MCI] CD Audio" entry and press OK Button
- G) Insert Windows Disk asked for and follow instructions.
- H) Restart windows. You should now be able to Run CD Wizzard to play Music CDs.

If after the above steps you are still not getting the MCICDA.DRV to run, follow these instructions:

- A) Edit SYSTEM.INI.
- B) Find the [MCI] section.
- C) There should be a "CDAudio=mcicda.driv" entry. If not, add it.
- D) Save SYSTEM.INI and exit editor.
- E) Do a directory listing on your <windows>\SYSTEM directory.
- F) Is MCICDA.DRV present? If not:
 - 1) Search Windows 3.1 Install disks for a file "MCICDA.DR_". On 3 1/2 HD it is #4.
 - 2) Use EXPAND.EXE command to expand file to <windows>\SYSTEM.
 - 3) Restart windows.

One major problem that we have seen with CD-ROM drives is that the lens pickup system gets dirty easily. This can cause the CD-ROM drive to act very strange. It will skip in playing songs, reset the drive, or not play a disk at all. To clean a CD-ROM drive, a CD cleaning disc can be bought at most audio stores. Run the disc through the drive. This should solve the problem. You should clean your drive at least every 60 days.

Common Problems

This section contains a list of common problems using CD Wizzard. The following are the known problems:

Error Number: 262. This error is a general CD-ROM Driver error code. It is usually do to the CD-ROM drive not supporting SEEK commands. Try setting the Tolerant Drive Mode option in Player Options. This should remove the error.

CD-ROM players have problems playing some music CD discs. The player will appear to loop or just reset occasionally. This could be do to a dirty lens pickup system. Buy a CD cleaning disc from an audio store. Run the disc through the CD-ROM. If the problem is still present, contact the maker of the CD-ROM for service.

Forward and reverse commands take a long time to reposition. This appears to be a bug in some CD-ROM device drivers. Try setting the Tolerant Drive Mode option in Player Options. This should remove the error.

Data CD-ROM discs do not have the same format as Music CDs. They will cause a Data Disc message to be displayed.

While CD Wizzard is playing, during the access to your CD-ROM, your system may slow down slightly. This is do to the multimedia extensions of windows. The slowdown should only be minor.

Copyright and Licensing

Menus - menu_

Menu Commands

These are the menus on the main windows menu bar.

File Menu

Discs Menu

Options Menu

Help Menu

The CD-ROM Controls Menu is added to the system menu for the main and icon window. The user simply clicks on the system box at the top of the main window or clicks on the icon when iconized.

File Menu

The File Menu includes commands that enable the user to get control of the entire program. They are as follows:

Register Command

CD-ROM Controls Menu

Uninstall Command

Exit Command

Register Command

Selecting the Register Command will cause Registration dialog to be displayed. The register command is used to register the program.

The register dialog box has directions on the steps needed to register the program. This program must be registered after the 15 day trial period.

CD-ROM Controls Menu

These are the menu commands that control the CD-ROM drive. They are listed below:

Play - Start playing a CD.

Pause - Pause or resume playing.

Stop - Stop Playing.

Eject - Eject the current CD.

Track Reverse - Go to the previous track in the playlist.

Track Forward - Go to the next track in the playlist.

Volume Up - Increase the volume of the CD-ROM device.

Volume Down - Decrease the volume of the CD-ROM device.

Uninstall Command

Selecting the Uninstall Command from the File Menu will cause a message box to be displayed. The user can select YES or NO to uninstall CD Wizzard.

The following files are removed from the user's system in the uninstall processing:

-  CDWREAD.TXT - text file with miscellaneous CD Wizzard information
-  CDW.HLP - CD Wizzard help file
-  CDW.INI - CD Wizzard parameter file
-  DATAxx.INI - CD Wizzard database files
-  CDW.EXE - CD Wizzard program file
-  CDAUDIO.TXT - Audio installation help file

Note: If SHARE.EXE is installed in the user's system, CD Wizzard will come across an error in the uninstall process. SHARE.EXE will not allow a program to access a file that another program is accessing. Windows is executing CDW.EXE so the program cannot access it to delete it. The error message can be ignored and the CDW.EXE file deleted by hand.

Exit Command

Selecting the Exit Command from the File Menu will terminate CD Wizzard.

Discs Menu

The Discs Menu includes commands that enable the user to work with CD Discs. They are as follows:

Display Track Playlist Command

Edit Current Disc Data Command

Copy Track Playlist Command

Maintain Discs Command

Display Track Playlist Command

This command displays the Track Playlist Dialog with information about the current track playlist. This dialog allows the user to select a different track to be played.

Edit Current Disc Data Command

This command displays the Edit Disc Data Dialog with information about the inserted CD Disc. This dialog allows the user to change all the information about the disc in the database.

Copy Track Playlist Command

This command displays the Copy Tracks Data Dialog to allow the user to copy disc information to the windows clipboard.

Maintain Discs Command

This command displays the Maintain Discs dialog box with all the discs CD Wizard has saved in its database. This command can be used to delete unwanted discs from the database.

Options Menu

The Options Menu includes commands that enable the user to control options of the program. The options are of the following categories:

Screen Options - options to configure the main windows look and feel.

Playback Options - options to configure the playing of CDs.

CD-ROM Drive Options - options to configure the users CD-ROM Drive.

Help Menu

The Help Menu includes options that enable the user to get help for the program.

For more information, the user should select the Help Menu Command Name:

Help Index Command

Using Help Command

About Command

Help Index Command

The Help Index command is used to invoke the Windows Help engine. It will start up with the help index for CD Wizzard.

Using Help Command

The Using Help command will display help on the Using Windows help system.

About Command

The About command will display a short dialog box that displays copyright and registration information. The More button may be pressed to display a picture of the development team for this software. The Register button may be pressed to register the software.

Keyboard - key_

Keyboard

Keyboard commands are shortcuts to the button options.

The following are the keyboard shortcut commands:

Button	Short-cut Key
 <u>Play</u>	'Ctrl-P'
 <u>Pause</u>	'Ctrl-A'
 <u>Stop</u>	'Ctrl-S'
 <u>Eject</u>	'Ctrl-E'
 <u>Track Reverse</u>	'Ctrl-R'
 <u>Track Forward</u>	'Ctrl-F'
 <u>Volume Up</u>	'Ctrl-U'
 <u>Volume Down</u>	'Ctrl-D'

Mouse - mouse_

Mouse

The mouse has a few special functions in CD Wizzard. In the main window it is used to press the buttons. In certain areas the mouse may be clicked to have special meaning.

When the  cursor is displayed, these special actions are active. The Status Bar will have a short message about what happens in that area.

When the CD Wizzard icon is displayed, the right mouse button may be pressed on the icon to toggle play or pause mode.

Definitions - def_

CD Wizzard Definitions

The following are the defined terms of the program:

CD-ROM

CD Wizzard

Clipboard

Disc

Playlist

Track

CD-ROM

A CD-ROM stands for Compact Disc Read Only Memory disc. A CD-ROM drive uses a laser beam to read very tiny ones and zeros from the encoded foil layer of the disc. A CD-ROM drive can handle over 650 megabytes of data.

CD Wizzard

CD Wizzard is a copyrighted work created by BFM Software.

Copyright © BFM Software 1994

Copyright © Brett McDonald 1994

All rights reserved by author.

Clipboard

This is the Windows Clipboard. The clipboard is used to place temporary information that is being copied. A user places information on the clipboard by copying and then pastes the information into another program.

Disc

A disc stands for a CD-ROM disc. Discs come in a few difference types Audio - contain audio tracks, Data - contain a data track, and Mixed - which contain both a data track and audio tracks. The CD player you might have in your home can only read Audio CDs. The CD-ROM in your computer can read all three.

Playlist

This is the list of tracks that is currently selected to be played. In normal mode all tracks are played sequentially, in shuffle the tracks are in random order, and in programmed mode the tracks are in the order the user selected.

Track

A track is a part of a disc that can contain one song for an audio disc or many files of information on a data disc. A track on CD-ROM is different than a computer disk because the tracks spiral together. Rather, a computer disk has many circular tracks that do not intersect. This is why CD-ROM drives have a much slower access time than computer disk drives.
