<u>AUTOMATIC</u>

MANUALLY INSTALLING START-UP SCREEN

MANUALLY INSTALLING SHUTDOWN SCREEN

If You Have Problems

AUTOMATIC:
Run 'setup'.bat by clicking on it in Explorer or at a DOS prompt. This will make a directory called c:\ windows\realscreens & move your original screens there.

If you decide you don't want to   use these screens run 'unscrns.bat'. This will delete these screens & reinstall your original screens.

MANUALLY INSTALLING START-UP SCREEN:
 (The following assumes that your boot directory is C:\   and your Windows directory is C:\WINDOWS)

1. To install this file back up your old c:\logo.sys file, if you have this file. (Win95 uses a default screen that is built into io.sys.) If there is a file called logo.sys then this will be used instead. Some other programs install such a file.

2. Copy this logo.sys to c:

3. When you next boot up you will have the new screen.

MANUALLY INSTALLING SHUTDOWN SCREEN:

1. To install these files, back up your old c:\windows\logow.sys   and c:\windows\logos.sys file.

2. Copy the new logow.sys and logos.sys to c:\windows

3. When you next shutdown your computer up you will have these screens.

Problems You May Experience-

You may be unable to see logo.sys & logow.sys.   To solve this, in explorer go to the View|Options menu   & under Hidden Files click on Show All Files.

As an alternative, you can open a DOS window & copy the files with the DOS copy command.
