Overview

Since Windows 95 is coming with an easy-to-use taskbar there is no more use for the old SpeedStarter. SpeedStarter now resides in the   most left corner of the taskbar and lets you easily lauch your programs.

When starting the first time, SpeedStarter creates a folder called **StartData.** SpeedStarter uses this folder to manage your programs. SpeedStarter will display any shrutcut placed in this folder in the   most left corner of the taskbar. You can run any program managed by the SpeedStarter by doubleclicking iits icon. If you click with the right mousebutton in SpeedStarters screen area a small   menu appears. Select **Close** to terminate SpeedStarter, **Customize** lto edit items or **Run** to run a certain program.

Displays a listbox with all items.. To add an item click on **Add.** To remove an item click on **Remove**.

Adds an item.

Removes an item.
