Net Flash

Net Flash

This function open the user specified website just by pressing a hotkey defined as **Net Flash**.

Example:

Define a hotkey which type is net flash,input 'http://www.he2000.com' as action contents. Once this hotkey is pressed,our   homepage will be open.

Email Flash

Email Flash

This function open a blank email to the user specified friend just by pressing a hotkey defined as **Email Flash**.

Example:

Define a hotkey which type is email flash,input 'techsupport@he2000.com' as action contents. Once this hotkey is pressed,the system default email program will display a blank email to our email address.

TxtCopy Flash

TxtCopy Flash

This function copy the contents of user specified text file to system clipboard, then the user can paste it to any other application by press CTRL + V .

This function is very useful for typing most frequently used text. You can use it for net chating,fill form,write documents,and so on.   This function can save your time very obviously. The author strongly recommend this function.

Example:

Define a hotkey which type is txtcopy flash,select a text file which contents is user's name as action contents. Once this hotkey is pressed,name of the user will be put into clipboard. Then by pressing CTRL + V, the user can input his(or her) name in any other program window which need input user's name.

Note:
(1)   You don't need save many such text files.
        Because a hotkey is only linked to only one such text file, if you have many text file like this, you have to spend many time on   remembering these hotkeys.

(2)   Just use this function for your most frequently used text.

(3)   When you are defining this type of hotkey , please don't select a non-txt file.

Run Program

Run Program

This function run the user specified program just by pressing a hotkey defined as **Run Program**.

The specified program can be '.exe', '.com', '.bat'   files. If the file type is not executable file , the system will open it by using corresponding program. You can save much time in searching file from 'START' manu or hard disk.

Example:

Define a hotkey which type is run program,select a file as action contents. Once this hotkey is pressed, the file will be executed or open.

Explore Folder

Explore Folder

This function explore the user specified Folder just by pressing a hotkey defined as **Explore Folder**.

Example:

Define a hotkey which type is explore folder,select a folder as action contents. Once this hotkey is pressed, the folder will be open by windows explorer.

Open Folder

Open Folder

This function open the user specified Folder just by pressing a hotkey defined as **Open Folder**.

Example:

Define a hotkey which type is open folder,select a folder as action contents. Once this hotkey is pressed, the folder will be open by my computer.

Tips

- Just set up hotkeys for your frequently used functions. Do not define too many hoekeys. Because it is difficult to remember more than 50 hotkeys. Maybe 15-30 hotkeys is the best choice.

- Please do define a hotkey for active the KBF's main window. This is very useful when you suddenly forget a hotkey. By activing the KBF's main window, you can choose your desired hotkey through three ways. One is click Run button, the other is press ENTER when the hotkey item was selected, the last is double click the selected hotkey.

- If you want to define a hotkey for reboot, logoff or shutdown system, please choose a complex hotkey combination to avoid any dangerous result by mistake.

- Some function are twinborn. If you defined one,you must defined the other. These functions include lock/unlock mouse,hide/show desktop icons and enable/disable taskbar.

- The system has some default hotkeys. So you can not use these system default hotkeys.
  Here are some system default hotkeys:

Win + F1	**Windows Help**
Win + D	**Display desktop**
Win + M	**Minimize all application windows**
Win + shift + M	**Unminimize all application windows**
Win + E	**Run explore**
Win + R	**Run Program**
Win + F	**Find files**
Win + break	**System property**
