

# TDR2000 Readme

PLEASE READ

Welcome to the TDR 2000 Alpha Test Demo.

This demo offers you a limited taste of the best all out action racer ever!

We've put you in the driving seat of the all-new Eagle for a strictly limited test drive. You've got 4 minutes to create as much mayhem as possible...

If you can survive...

The full game contains

9 Incredible interactive environments  
More than 45 vehicles  
50 races and missions  
Over 100 power ups  
Unique multiplayer arenas

## **1. SYSTEM REQUIREMENTS**

Hardware accelerated mode (640x480 16bit colour or above)

**Minimum Spec** (This applies to the Alpha Test Demo only. The full game also supports software mode)

- Intel Pentium 200Mhz CPU or equivalent
- 64MB RAM
- Windows 95/98
- DirectX 7 supported D3D Accelerated Graphics Card with 8Mb RAM or above  
(D3D performance will vary from card to card)
- 210MB hard drive space
- DirectX 7 supported soundcard
- 8 x Speed CD-ROM or above
- 200MB Swap file

### **Minimum Recommended Spec**

- Intel Pentium II CPU
- 64MB RAM
- Windows 95/98
- DirectX 7 supported D3D Accelerated Graphics Card with 16Mb RAM or above  
(D3D performance will vary from card to card)
- 210MB hard drive space
- DirectX 7 supported soundcard
- 8 x Speed CD-ROM or above
- 200MB Swap file

### **Full Performance Recommended Spec**

- Intel Pentium III CPU
  - 64MB RAM
  - Windows 95/98
  - DirectX 7 supported D3D Accelerated Graphics Card with 32Mb RAM or above
  - 210MB hard drive space
  - DirectX 7 supported soundcard
  - 8 x Speed CD-ROM or above
  - 200MB Swap File
- 

## **2. DIRECTX7**

TDR2000 has been optimised for DirectX7, in order to take advantage of this optimisation you are strongly advised to install DirectX7 when prompted to.

#### Hardware Acceleration

TDR2000 runs in Direct3D, this ensures that the game provides the best performance on the widest range of 3D video cards.

---

---

### **3. GAME LAUNCHER**

When the game starts it examines the hardware in your PC and works out the best graphics mode to run in. The launcher will default to Direct 3D for the demo (Do Not Change this) but a software mode will be available for the full version of the game.

*NOTE: If you have a video card with the voodoo 1 or 2 chipset then you will need to change from your primary video card to the Voodoo card by using the drop down box titled 'Display Driver'. Then tick on the Triple Buffer box.*

You may need to install the latest drivers for your graphics and sound card to secure the best performance from the game. These drivers are normally available from your card manufacturer or they may be downloaded from the Internet. (See the 3D CARD SUPPORT SITES below)

It is possible to override the options the launcher selects but we recommend playing the game in whatever default mode is initially presented before selecting any alternate modes.

In the launcher clicking on the Advanced button offers extra options. If you have any performance issues in Direct3D turning off some of these options may improve the games performance.

---

---

### **4. IN-GAME CONTROLS**

The 'W' key will turn hard shadows on & off, this may increase and decrease the game performance. We recommend only turning on the shadows for higher performance machine.

F1 - F12 keys step through the different Camera Angles.

The '-' & '+' keys on the main keyboard adjust the draw distance, setting a lower draw distance may increase the game performance and setting a higher draw distance may decrease the game performance

Recover  
Turn Left

Return/Insert  
Left Cursor Key

Turn Right	Right Cursor Key
Accelerate	Up Cursor key
Brake / Reverse	Down Cursor Key
Handbrake	Space
Wheel Spin	Z
Repair	Backspace
Show Map	Tab
Cockpit View	F6
Change Camera Mode	Function Keys
Target Cycle	Y
Keyboard Operable Power-ups	;'
Activate Selected Power-Up	Alt
Screen Shot	Prt Scr

---

## 5. TROUBLE SHOOTING

Q. > I can't see a way of removing the demo from my PC, can it be uninstalled?

A. > The demo can be uninstalled at any point by clicking on the 'Start' button in Windows and then selecting 'Settings', click on the 'Control Panel' option. Select the 'Add/Remove Programs' option. Scroll down the list of installed software until you get to an entry entitled 'TDR2000 Alpha Demo'. Double click on this entry and follow the onscreen instructions.

---

## 6. KNOWN PROBLEMS

The following are a few of the problems we know about that WILL be addressed for the full game and should be avoided in the demo.

Pressing ALT + TAB to switch to Win9X desktop may lockup the machine. At present selecting 1024x768 on a 8MB & 12MB voodoo 2 card 8mb and 12mb will cause the PC to lockup with a black screen the game will play well at resolutions below this however and this will be resolved in the full version of the game. (2 voodoo 2's in SLI mode support this higher resolution.)

## 7. QA REPORT ON D3D SUPPORT AND PERFORMANCE

Base PC of PII 266 Celeron with 64Mb of RAM. Since PCs from the same manufacturer and the same model performance and compatibility can vary from PC to PC this table is provided purely for information.

A particular card's performance cannot be guaranteed.

<b>Card</b>	<b>Chipset</b>	<b>Memory</b>	<b>Comments &amp; Recommendations</b>
3DFX	Voodoo1	4Mb	Occasional problems have been experienced with this card when running the demo.
3DFX	Voodoo2	8Mb	Fine. 640 x 480. Turn on Triple buffer to improve speed (On some machines).
3DFX	Voodoo2	12Mb	Fine. 640 x 480. Turn on Triple buffer to improve speed (On some machines).
3DFX	Voodoo2 Banshee	16Mb	Fine. Some drivers can cause HUD corruption. Latest drivers fix this.
3DFX	Voodoo3 2000	16Mb	Fine. 640 x 480. Turn on Triple buffer to improve speed (On some machines).
3DFX	Voodoo3 3000	16Mb	Fine. 640 x 480. Turn on Triple buffer to improve speed (On some machines).
3DFX	Voodoo3 3500	16Mb	Fine. 640 x 480. Turn on Triple buffer to improve speed (On some machines).
Matrox G100	G100	8Mb	Not Supported.
Matrox G200	G200	8Mb	Problems have been experienced with this card when running the demo.
Matrox G400	G400	16Mb	No known problems. Driver version 552
Matrox G400	G400	32Mb	Runs well. No known problems. Driver version 552
Nvidia	TNT	16Mb	No known problems. Detonator drivers 3.68.
Nvidia	TNT2	32Mb	Runs well. No known problems. Detonator drivers 3.68.
Nvidia	TNT2 M64	32Mb	Runs well. No known problems. Detonator drivers 3.68.
Nvidia	TNT2 Vanta	8Mb	No known problems. Detonator drivers 3.68
Nvidia	Geforce	32Mb	Runs well. No known problems. Detonator drivers 3.68.
Nvidia	Geforce DDR	32Mb	Runs well. No known problems. Detonator drivers 3.68.
Nvidia	Quadro	64Mb	Runs well. No known problems. Detonator drivers 3.68.
ATI	Fury Maxx	64Mb	Runs well. No known problems. Drivers off CD
ATI	Rage 128	8Mb	No known problems.
ATI	Rage 128	32Mb	Runs well. No known problems
ATI	Rage Pro	8Mb	No known problems.
3Dlabs	Permedia 2	8Mb	Corrupt HUD. Latest drivers fix this problem.
