

LSU Velvet Dreams CD-ROM (c)1994 LSU, Inc.

THIS PRODUCT IS FOR ADULTS ONLY. YOU MUST BE 18 YEARS OR OLDER TO USE THIS SOFTWARE!

Installation

If you do not have QuickTime For Windows™ installed on your system, you must run QTWINST.EXE before installing the program. This will install a partial copy of QuickTime For Windows™ on your system.

To install the programs on CD-ROM, start Windows. Choose "Run..." menu item from the "File" option of Program Manager. Type "*CD-ROMdrive*:\\INSTALL", where *CD-ROMdrive* is the drive letter of your CD-ROM drive. Follow any on-screen instructions. The installation program will create the group "Velvet Dreams" and the program icons "Velvet Dreams" and "Read Me". Double-click on the "Velvet Dreams" icon to start the program.

Since this program does not copy any files to your hard drive, the CD must be in your CD-ROM drive to run the program.

Notes

To make the PANIC work faster when you need it, click on the PANIC, then choose CANCEL instead of QUIT. The next time you use the PANIC, it will be much faster.

Due to a problem with scripting over QuickTime for Windows™, the cursor will display the hourglass instead of returning to the arrow (except along a small area along the bottom of the movie screen.....).

System Requirements-MPC-Compatible computer

80386 or better required.

4 megabytes of RAM, 6 megabytes recommended.

Color VGA monitor or better, 8-bit SVGA video card (minimum 256 colors at 640 x 480 resolution) or better required.

MS-Windows 3.1 or higher.

Sound Blaster or compatible sound board.

Hardware Issues

Certain high-resolution video cards contain a problem within the display driver that can cause Windows to crash. The crash will be a General Protection Fault error in module GDI.EXE at 0017:0356. Contact the video manufacturer to see whether an updated driver for Windows exists that corrects this problem.

Windows 3.1 Issues

You should disable any screen savers prior to running Director 3.1 Player for Windows™. If a screen saver becomes active while the cursor is on screen, when returning to the movie the cursor may be invisible. Starting and stopping the movie again restores the cursor.
