

## Face Selection

The face selection dialog box allows the face used by the current application to be selected. Faces can also be removed and installed using this dialog.

### To choose a new face:

- o Select the face from the list and press OK. Faces which are on the CD-ROM will not be listed unless they have been copied to the hard disk or the CD-ROM is present. After selecting a face which is on the CD-ROM, you will be asked if you want to copy it to the hard disk. The face will always be available if copied to the hard disk. It will be available *only* when the CD-ROM is present if you do not choose to copy it.

*Note:* You can choose No face if you do not want an animated face to appear for the current application.

### To exit without changing the face:

- o Press Cancel.

### To configure a face:

- o Choose the face and press the Face button. Most faces do not require configuration.

### To copy a face from CD-ROM to the hard disk:

- o Select the face
- o Press the Copy from CD-ROM button. This button will not be available if the face cannot be located on the CD-ROM, or if the face is already on the hard disk.

### To remove a face from the hard disk:

- o Select the face
- o Press the Remove from hard disk button. This button will not be available if the face cannot be located on CD-ROM, or if the face is not on the hard disk.
