

## Applications Enhancer Kit

The Pointix Applications Enhancer Kit includes several tables customized for various specific applications. For each individual application, Pointix includes a specific table with respective Float Bars and Menus. Each Float Bar includes the most frequently used commands of its application. The Menus are identical copies of the application menus but they can be retrieved from anywhere on your screen. This feature is very useful if you have to repeat an operation from a menu and you don't want to open your menu each time.
