EasyKeys 1.0

Turn Your Soundcard into an Electronic Keyboard!

EasyKeys transforms your PC into an electronic keyboard for less than the cost of one music lesson. Its features can be found on keyboard synthesizers costing hundreds of dollars or more! This incredible music machine makes it easy to sound like a pro - even if you've never touched a musical instrument.

If you can click, you can jam with EasyKeys! Just turn it on and press play. Watch the LEDs move to the beat. Add an effect or two. EasyKeys makes music that'll have you dancin' in your chair. EasyKeys offers 40 different grooves to play with and over 90 way files, too. So crank out some funk or turn on the heat with a little cool jazz. Add sound effects with the touch of a button.

EasyKeys contains expert "auto" features such as one-touch chord playing and never-miss-a-note soloing. You can record your live performance with EasyKeys' JamBox and play it back again and again. And best of all, EasyKeys works with any Windows-compatible soundcard for hours of fun.

If you like music, you'll love EasyKeys!

Critics Say . . .

"EasyKeys allows you to use your PC to mimic the functionality and sound of an electronic keyboard. It's inexpensive, fun, easy to use and...doesn't make you think you need to know something about music to take full advantage of it's capabilities".
