

Memos For Windows

Description

Memos For Windows is a simple program for Windows 3.x and above. It allows you to put Memos onto your desktop at a double click. These can be edited, moved around, resized and closed. The Memos will stay on your desktop until you close them, even if you shut down windows.

Usage

To use Memos For Windows simply run the program from your accesories area. In a few seconds a blank memo will appear. To edit it, simply click on it and use standard edit keys, such as those in Notepad. To close double click on the - or X button.

Note: For the memos to survive Windows shutdown you must have MEMOLOAD.EXE in your startup area.

Donations

For Danger Of Death to be able to continue making quality programs it requires some income. To promote the creation of further quality software, please send postal/international money orders for any amount to:
