Help items:

Add (click **Add** or *Edit/Add*)

Remove (click **Remove** or *Edit/Delete*)

Slice Them (Click **Slice Them** or *File/Slice Them*);

Options:

Sliced File Path Location:

This option will tell the Slicer where to do what it does.

Current directory: The Sliced files will be stored in the current directory all the time.

Floppy Disk: The Sliced files will be stored on a floppy disk. The program will prompt you for the disks as needed.

Sliced Path: The Sliced files will be stored in this directory all the time.

Slice Size: Change slice size in the edit window. The size of the sliced files is in MB. If you need the slices to be an exact size, you may enter that size in bytes preceded by the @ sign.

EX: @1350000 rather than 1.35 MB (actually 1.28 MB).

Del FILE after slice: This option will delete the original file.

Del FILE after contat: This option will delete the sliced files after rebuilding the original file.

Right Click Menu Support: This option will enable/disable right click mouse support for slicing files.

Slice is an option when rightclicking on any file name.

Add file to slice list

Making this selection will bring up the blank entry browser.

Browse to the desired directory, double click on file to add to list.

[Back](#) to the top.

Delete Logo Entry

The current entry(s) will be deleted.

Slice them

This option will slice the files.

they will be numbered as such:

filename.bat
filename.s10
filename.s11
filename.s12
etc.

filename.bat will re-assemble the files.
