

Smart TAB printer Utility

About the author

What it does

Using Smart TAB printer

What it Does

The Smart TAB printer utility lets you print .TAB files in the way you'll like. The main reason for making this utility is that regular printing of .TAB files is always good because often the page break comes in the middle of the TAB, making it difficult to read. And using a word-processor is a time consuming process and is not always easy.

It was designed to be simple of use.

Using Smart TAB Printer

Smart TAB printer was designed to be easy to use. It contains no menu, only toolbar.

On the toolbar you can see the following buttons:

- Opens a new file
- Prints the TAB
- Invokes the printer setup dialog
- Automatic repagination of the document

After the repagination **Red** lines will show you the pagebreaks like it will be printed. You can move the red lines with your mouse by dragging it. The page break will be at the place where you put it.

If you moved it down and thus made the page above too long, a message will be displayed and the page break will be returned to its previous location.

If you moved it up and thus made the page below too big, all page breaks below will move up, so that the page won't be too long. A message will appear for each page break.

About

This program was made by Jacob Gorban from Israel.

This is just the first version, kind of a beta-test of the program, so any replies, bug reports and suggestions are welcomed.

I myself still have a To-Do list for the program, so I may be will post a new version soon.

My e-mail address is gorban@netvision.net.il.

Write me.
