Created by: Jason Greene

INTRODUCTION

I created Pro Start because I needed a way to start up several applications upon startup of Windows 95. I need those applications to startup in a certain order and not necessarily alphebetical order. This is my first C++ program, so there might be a few bugs.

INSTALLATION

This program requires the use of an INI file. The name of this file is PROSTRT.INI and should be located in the WINDOWS Directory. The INI file is used to store the names of the files to be started and in what order they will be started. You would also place the amount of time, in seconds, you want to wait before the Applications begin to Start. The file looks like this:

[Startup]
1=_filename_   The _filename_ is the complete directory
2=_filename_   path and filename of the Application.
3=_filename_   Files will be started in Numerical Order.
etc...

[Timer]
Seconds=_seconds_   The _seconds_ is the amount of time, in seconds, you would like to wait, after **Pro Start** has started, for your Applications to begin to start.

That is all there is to this file.

HOW TO USE

Place the EXE file in your startup folder. When Windows starts up so will the program. Your applications will begin starting, in the order you specify, once the time specified in the PROSTRT.INI file has expired.

PRODUCT SUPPORT

You can report any bugs found in the Application to:

Firestar BBS
407.835.1728
-or-
e-mail
jason16@ix.netcom.com

Please contact me at one of the above if you have any questions or comments.

WARRANTY/DISCLAIMER
Firestar and Jason Greene will not be liable for any damages arising out of the use or inability to use the software. Use at your own risk.

LICENSE AGREEMENT
This product is FREEWARE. You do not have to pay for this Application. You may use and distribute this product in any way see fit.
