This component is something like Borland's TRadioGroup but it groups checkboxes instead of radiobuttons. Same as TRadioGroup it alignes ist child controls itself, so you don't have to do it. You can set them all at once of every one separately. Because it uses bitmaps to show them, you can make it look as you want it to be. Properties like TextAlign, BmpVAlign, BmpHAlign and WordWrap allow for additional control.
