  from negligence, strict liability, or breach of warranty or contract, even after notice of the
        possibility of such damages will not be provided.

===

Overview:

  TMessageDialog is a component that replace the MessageDlg function. TMessageDialog
      component will greatly simplify creating and maintaining message boxes in your
  applications.
  This component add a number of enhancements such as the ability to specify dialog
  captions, Buttons Font, Message Font, dialog screen Positions, audible Beeps, formatting
  Strings, Style and Color of the dialog, Buttons Glyphs, Button Style, Hints and Hint Color
  (Beware that the HintColor property sets the color of all hints in the application, not just
        the Message Dialog), Multi-line messages, Default Buttons, Minimal Width of the
Dialog   and the possibility to move the cursor over the button that has the focus when
the Dialog   is displayed.

  At design time, you can immediately view the dialog box by double-clicking on the
  component or by selecting the ShowMeNow property in the Object Inspector.

  This component is the Copyright of InforTech, Inc. It is being distributed as Shareware.
        This Shareware version will only work while Delphi is running.

Documentation:
  Complete documentation of the component can be found in **MSGDLG.HLP**.

===
License and Registration:

TMessageDialog is a SHAREWARE component.
You may freely upload the component to any public bulletin board such
as the Internet, Compuserve, Prodigy, America On-Line, etc.
Shareware distributors may, however, distribute the component for a small
fee to cover their distribution costs.
You may not modify, add, delete or replace any of the distribution files without the
permission of the author.

If you find TMessageDialog useful, you are expected to register.

Registered users will receive:
   *   The latest compiled version of the MessageDialog
            component on a floppy disk or via Internet E-mail.
   *   Elimination of the requirement to have Delphi running
            while the component is in use.
   *   The right to use the component, royalty free, in any
            application.
   *   Free minor upgrades. These include bug fixes and
            any minor changes up to the next major version.
   *   Free technical support for the life of the component.
   *   Information regarding new releases and other interesting things !

Please refer to the REGISTER.WRI file for information on register this component.

*The file ORDERINT.WRI contains the "International Order Form" and
should be used for everyone that comes from a country diferent
than Portugal.*

*For Portuguese users check out the ORDERPOR.WRI file that contains the
"Portuguese Order Form".*
