PageSetup unit

The PageSetup unit contains the declarations for page setup dialog box and for the enumerated type associated with it.

When you add a component declared in this unit to a form, the unit is automatically added to the uses clause of that form's unit.

The following items are declared in the PageSetup unit:

Components

TPageSetupDialog

Types

TPageSetupFlags
TPageOptions

To see a listing of items declared in this unit including their declarations, use the ObjectBrower.

TPageSetupDialog component

Unit
PageSetup

Description
The TPageSetupDialog component displays a page setup dialog box that permits the user to select which printer to print to, the page type,the page orientation and the printing margins.
Display the page setup dialog box by calling the Execute method.
You can customize how the page setup dialog box appears and behaves using the Options property.
The margins of the page are specified with the MarginLeft, MarginTop, MarginRight and MarginBottom properties.
The minimum values of the margins are specified with the MinMarginLeft, MinMarginTop, MinMarginRight and MinMarginBottom properties.

The TPageSetupDialog component is an indirect descendent of TComponent. In addition to the following properties and methods, this component also has the properties and methods that apply to all components.
