

Free T-shirts and up to 50% savings!

Order Blinker or NOVLIB now and choose one of our top quality American-made T-shirts with award-winning graphics. Each T-shirt features four color artwork on both sides and will be shipped as soon as we receive the completed registration card for your new product(s). See below for special offer details and use the attached order forms to order today!

Why have over 50,000 programmers worldwide chosen the award-winning Blinker product and what can it do for you?

If you program in CA-Clipper or C/C++, Blinker can **save you time** and help you to **create more powerful software**. A unique blend of functionality and value, Blinker combines a royalty-free DOS extender with the fastest available Windows linker **and** DOS dynamic overlay linker. CA-Clipper 5.3 includes a "real mode only" version of Blinker, but only the full Blinker product offers you incremental linking, dual mode, the Blinker DOS extender, the Windows linker, the swap package, C/C++ support and much, much more!

Don't waste time waiting for your programs to link!

Incrementally link real **and** protected mode CA-Clipper programs in **less than a second** with Blinker, the only product smart enough to relink just your program changes. Dramatically increase productivity and virtually eliminate "down time" with the fastest link times for real mode, protected mode **and** Windows programs, all in one product.

Why worry about your runtime environment?

Combining a dynamic overlay linker with a DOS extender offers a unique advantage. You can create protected mode **and** "dual mode" programs. No larger than protected mode .EXEs, dual mode programs evaluate the runtime environment and **automatically run in either real or protected mode accordingly**.

In real mode, dual mode programs run within the 640Kb conventional memory limit, automatically managing overlays so you don't need to design overlay structures. In protected mode, dual mode programs directly access up to **16Mb of extended memory** and 64Mb of virtual memory under DOS, or in Windows and OS/2 DOS boxes.

Run any program from within your application!

Run a word processor, communications program or report generator from within your main program using the Blinker swap package for real and protected mode DOS. Blinker frees up all but 10Kb of the conventional memory used by your main program to run the new program.

Start saving time and money now! Order Blinker today to receive your free designer T-shirt!

Feature checklist

Windows linker, DOS extender, dynamic overlay linker, dual mode capability, royalty-free, swap package (super "RUN" command), Microsoft C/C++, CA-Clipper, FORTRAN, Assembler, Borland C/C++ support, serial number encryption, EMS/XMS overlay caching, demo versions, "burn-in" of CA-Clipper environment variables, symbol table compression, internal or external overlays, comprehensive extender API, Codeview support, DPML, VCPI and XMS compatibility, Norton Guide, comprehensive technical reference manual, free designer T-shirt!

Create NetWare-aware programs the easy way!

Directly access NetWare from within your programs using NOVLIB, the first dual and protected mode network library for CA-Clipper. **Voted Best Network Library in 1994 and 1995** by the readers of *Data Based Advisor* magazine, this powerful product features over 450 memory-efficient functions designed to be called directly from CA-Clipper.

Easily integrate your programs with NetWare

Why shell out to DOS to use the Novell utilities when you can do the same thing from within your program? A single NOVLIB command can replace an **entire** NetWare utility, such as MAP to assign network drives, or CAPTURE to redirect printer output. **Create more user-friendly software** and save yourself the trouble of training your end-users to operate NetWare!

Limited only by your imagination

Written in C and Assembler for maximum efficiency, NOVLIB enables you to create quality programs for NetWare versions 2, 3 and 4 with minimal memory overhead. All functions adhere strictly to NetWare security, so users cannot perform any task without appropriate access rights. **Suitable for the beginner and the experienced programmer alike**, NOVLIB offers high level commands to make NetWare programming easy, plus low level functions to help develop even the most comprehensive network programs.

Take control of the NetWare environment:

- Keep track of who has a particular file open on the network.
- Log off users who have left for the day.
- Find out when a file was last modified and by whom.
- Send messages between workstations using NOVLIB's IPX / SPX functions.
- Disable network message receipt.

Manage network printers:

- Defer printing.
- Print multiple copies of a document.
- Automatically locate the first available network printer.
- Move jobs to another printer to optimize printer usage.

Build security into your programs:

- Limit access to network drives.
- List all available network resources.
- Display the user name at a specified workstation.
- Access the file server serial number for copy protection purposes.
- Limit a program to a specific number of users using semaphores.
- Back up the bindery.

Monitor resources usage:

- Monitor the use of your programs.
- Charge a user's NetWare account for any resources, such as program use, connection time and disk space.

Access the power of NetWare now! Order NOVLIB today to save 50% and receive a free designer T-shirt!

Free T-shirts and up to 50% savings!

Order Blinker or NOVLIB now and choose one of our top quality American-made T-shirts with award-winning graphics. Each T-shirt features four color artwork on both sides and will be shipped as soon as we receive the completed registration card for your new product(s).
