Purpose:

CusGen is a tool for Visual Basic 2.0 programmers to package their application and generate a professional custom installation program that they can distribute to install their application on any PC.

Usage:

A VB programmer starts CusGen and enters specific information of their application, such as how many executable files, dll's, how much disk space is needed, the title of the application, etc...

The magic of CusGen then commences, the programmer hits the Translate button, and viola, a text file is created with VB code custom to the application. This text file, "CUSTOM.TXT", is then used by a Visual Basic project called "SETUP.MAK". The programmer starts VB 2.0 and opens the project "SETUP.MAK" and loads the text file "CUSTOM.TXT" into the LOAD property of "SETUP1.FRM". An executable file called, "SETUP.EXE" can then be compiled. That's it, the programmer can then distribute the executable file along with the application's needed files and the "SETUPKIT.DLL" of this diskette to setup their application on any PC.

Requirements:

This product requires Visual Basic 2.0 to generate the setup .EXE file.

REGISTRATION REMINDERS

Unlicensed copies of CUSGEN are 100% fully functional.

Unlicensed copies of CUSGEN have a pesky registration reminder screen that pops up whenever you start the program.

We're sure that once you see the incredible quality of our software, you will dig out your credit card, pick up the phone, and call the nice people at RMJ to register CUSGEN.

When you pay for the shareware you like you encourage us to bring you more of the same quality of products. Pay for what you like, and more of what you like will almost be developed.

DISCLAIMER

Of course the usual disclaimers still apply. We are not responsible for anything at all. Nothing. Even if we are held responsible, the limit of our liability is the licensing fees you paid. The full text of our license agreement is found near the bottom of this file.
