

### Page to display

The bottom-left corner of the window has a pop-up menu — and arrows to the left and right of it — for controlling which page is displayed. These can be used three ways:

- Click an arrow to flip backward or forward one page.
- Hold down the mouse button on the page number shown to pop up the menu, then select the page number you want to see.
- Select [Go To](#) (Command-T) on the pop-up menu, type the page number you want to see, and click Go or press Return.
