SuperClock v1.0 Shareware Installation Notes

Thanks for trying **SuperClock**..

On the **shareware installation** diskette you will find the following files.

SUPERCLK.EXE   : The **SuperClock** Program
SUPERCLK.HLP   : The **SuperClock** Help File
SC_ALARM.EXE   : The **SuperClock** Alarm Dispatcher
BWCC.DLL   : A Custom Controls Dynamic Link
Library
README.WRI   : This File
BBS.TXT   : A text file description of **SuperClock**

To install the shareware version of **SuperClock**, copy the BWCC.DLL file to the
WINDOWS\SYSTEM folder[1] on your system.

The other three files; SUPERCLK.EXE, SUPERCLK.HLP, and SC_ALARM.EXE
may be placed in any folder you desire, provided they are all in the same folder together. All three files are required for the shareware version.

To have **SuperClock** start when you load Windows (recommended) , after you have copied the files to the folder you have chosen, launch the File Manager and drag the SUPERCLK.EXE application into your startup folder[2.].

DO NOT run the SC_ALARM.EXE application, **SuperClock** launches this application automatically.

SuperClock makes no modifications to your WIN.INI file and does not write to any
files outside of the folder in which it is installed.

If you have downloaded the optional SUPER1.ZIP file, it contains Windows *.wav
files for use with **SuperClock**. You may place these files wherever you desire.

---

[1] Advanced installation note: BWCC.DLL may also be installed in either the WINDOWS folder or
 in the same folder as **SuperClock**.

[2] Optionally, you may edit your win.ini file to include SUPERCLK.EXE on the RUN= line.
