## How Duzzit Do It!

*Where does Insert IT! derive the Name, Address and Initials information?*

All of the Author entries (Name, Address and Initials) are derived from Tools Options User Info. To change this information, choose Options from the Tools menu and select User Info from the list of Category icons (on the left). Edit or add information to the edit boxes labeled Name, Initials, and Mailing Address.

*Where does Insert IT! derive the FileName and directory path information?*

This information is pulled from the File Summary Info Document Statistics dialog. To access this information, choose Summary Info... from the File menu and click on the Statistics button.

*Where does Insert IT! derive the Page number information?*

If you select the "Page X" option, Insert IT! will insert the word Page and the special Word for Windows {page} field. By using a field, Word for Windows will automatically update the page number with each new page. The "Page X of Y" option can be used to insert the current page number out of the total number of pages. For example, "Page 1 of 7" on page 1 and "Page 2 of 7" on page 2. In this case the {page} and {numpages} fields are used by Insert IT!. As you add more pages to your document the total number of pages will automatically update (when the document is printed) to reflect the added pages.
