Riverside

This file contains a Type 1 hinted font that was developed with a Microtek 300Z scanner, Adobe Streamline, Adobe Illustrator 88, Fontographer 3.1, and a printed alphabet of a font called Ripoff that I couldn't find anywhere for the Macintosh. It contains a full set of upper/lower case characters and numbers and works fine on ATM.

The bitmaps are in size 12,18,24, and 36 but I didn't have any time to spend on them so the font looks MUCH better when printed (especially in smaller point sizes!)

This is my first attempt at font generation so I would appreciate any comments or donations to the "Steve Tulk Starving Student Fund". You may contact me on Compuserve at 76646,3017, America Online name: Stevo4 or at my mail address:

You may freely distribute (not sell) this font to your friends or whatever as long as you keep this ReadMe file with it. If you are a commercial enterprise selling disks of shareware and freeware, you may not distribute this font without my permission.

This font is offered at is. I will not accept responsibility if it doesn't work for you.
