General Information on "Font Elegance".

Last Minute Notes:

If you have any problems with our fonts please give us a call or E mail us. We have a few solutions for problems associated with Truetype Fonts.

Sending in your registration form allows us to give you free tech support. Without registering your CD, we do not know who you are or what type of computer you have. You may E-MAIL us your registration form or you may also Fax us your registration form.

Send In the Registration form found on the CD-ROM in the Root "Register.wri"

Thank you for Purchasing "Icons Wallpaper and More for Windows". This CD-ROM Contains 4500 Icons, 500 pieces of Wallpaper, and 500 Fonts in Truetype, and Type 1 formats. The TrueType and Type 1 fonts match 1 for 1. If there is a Truetype Font on the CD-ROM, then there is a Type 1 font with the same name. This is for compatibility, for people that use Service Bureaus, or for people who use Type 1 on one computer and Truetype on another computer. All the fonts were fully tested using 4 major Windows Applications to ensure they print at large resolutions and that they do not crash your computer. If you have any problems with any of the fonts on our CD, we want to know. Our company wants to ensure that you, the customer, receive the highest quality fonts available.

Organization of Fonts on the CD-ROM

Instead of just throwing fonts together as a collection, we have spent months sorting and categorizing our fonts to make it easier for you to find just the font you need for a job. If you are looking for a script font, you no longer have to go through all the fonts to find a font you need. This also made it easier for us to make sure there is no duplicated on the CD-ROM. We have made from scratch many of the fonts found on this CD-ROM and have added some really wild new types of fonts that you will not find anywhere else. How many more "basic" fonts does a person need?

How to make sense of the Filenames on the CD-ROM.

We have designed a proprietary filing system to make font file names match with the font instead of trying to make up an 8 character filename. As an example lets take the script section. The fonts in the script section of the CD all start with "S" for script. the Number following the "S" is the Font number, and the letters following the number is the styles and variations. Say you need Script 2 Extended. The Filename would be "S2E". This also makes it very easy for people who would like to search for any variety of Script 2 or any other font on the CD-ROM using a "Whereis" type program. Say you want to find any font on the CD-ROM that is Script 2, you could do a search for "S2*.*" If there was any contour, spotted, hollow, or any other varieties of this font, it would show up. Going through each directory, you can figure out what every font style starts with. Sending in the registration form enables you to receive a full explanation of the filing system of our fonts.

Please contact us if you have any other questions.

You may Fax us at 216-951-9241
