

Mail Scrubber

The **Mail Scrubber** is a basic mail filter designed to dump most unsolicited mail into the **Junk Mail** folder. If your email address does NOT appear in the **To:** or **CC:** fields and the message is NOT **From** an email address listed in your **Address Book**, the message is automatically moved to the Junk mail folder. If you don't want to create your own filter, this is a good filter to use. The Aggressive Mail Scrubber destroys any message sent to you unless their name is in your **Address Book**.
