

Address Book

The **Address Book** lets you store the email addresses for people you regularly send mail to. By default, **MailBox** adds addresses for sends and recipients to your address book. When writing a new mail message, click **Show Addresses** to view and select from the addresses in your **Address Book**. Highlight one or more addresses then click a **To**, **Cc**, or **Bcc** button to add the selected address(es) to your message.
