This booklet provides you with installation instructions and how to get started. For detailed information on all the features and functions, click on the Help button located throughout the program.

To install **Stereograms!** CD:

Place the CD into your CD-ROM drive.

At the Program Manager, select FILE, then select RUN.

Type in D:\Install (or whatever letter your CD drive is)

Follow the installation instructions that appear on the screen; you can accept all the defaults as they appear, or change the drive and directory as you wish. The program installs some of the files on your hard drive, creates a **Lifestyle Software Group** Program Group and places an icon in that group.

You install the program once, but always place the CD in the CD-ROM drive whenever you run **Stereograms!**. Double-click on the icon from the Program Manager to run the program.

Once you have opened **Stereograms!**, there are several ways to use the program. Select FILE from the menu and choose Make Stereogram from Bitmap, Load/View Stereogram Bitmap or Make Wallpaper.

MAKE STEREOGRAM FROM BITMAP

First create an image in Paintbrush™, Corel Draw™, PC Paint® or another paintbrush tool for Windows. Then you can open it in **Stereograms!** after selecting Make Stereogram from Bitmap.

CHOOSE DEPTH BITMAP

This is the first step in creating a stereogram once your image is created. Preview your selection of bitmaps in full color as you choose which one to turn into a stereogram. Select Open once you have picked an image.

SET COLOR ELEVATION

A stereogram is like a relief map; to create the 3-D effect, each color in the image needs to have a different elevation. You need to determine the depth value of each color; the lower the number, the further away that section of the image will appear when made into a completed stereogram. You can do this either by clicking on each color individually or by drawing a line and letting **Stereograms!** set the color elevation.

CHOOSE TILE BITMAP

The tile pattern is the design that is visible when your stereogram is completed. You can preview your choice of tiles, then select Open. Or, if you wish, you can skip this option and **Stereograms!** will automatically choose Random Dots for your completed image.

CREATE STEREOGRAM

When you select this step, you have the option of changing the depth and contrast of the stereogram, or you can accept the default settings. You can play around with these two controls to determine how you like to set up your stereograms. You also have the option of changing your tile pattern.

LOAD/VIEW STEREOGRAM BITMAP

Select this option if you wish to view or use a stereogram but do not want to create a new one. The program has over 100 completed stereograms to preview first and then use in desktop publishing.

MAKE WALLPAPER

You can change your Windows wallpaper by choosing any of the completed stereograms, tiles or ready-to-use images that come with **Stereograms!**, or by selecting any image you have created on your PC.
